

Reap the Rangeland rewards

Carbon Projects in the Rangelands

Landowners in the rangelands can access new carbon credit methods, enhancing revenue and agribusiness. Our approach customises each project for optimal outcomes, involving collaborative development and precise land practice assessments.

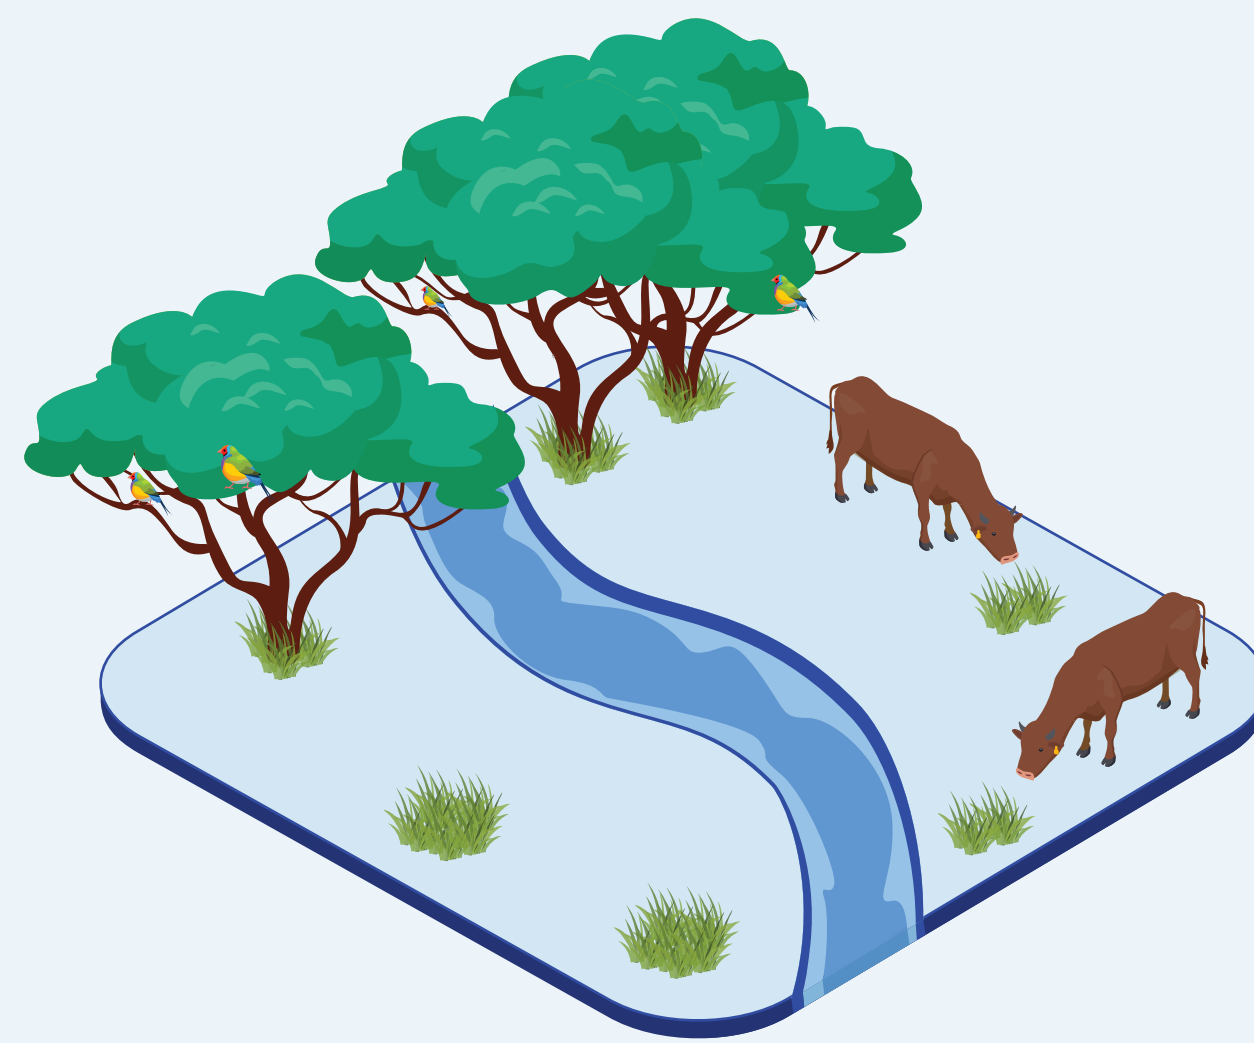

Carbon projects can bring in financial returns for improving the productivity and overall health of your land. South Pole has 17 years of experience working with landowners on projects that maximise production benefits while minimising intervention. We also have a global network of buyers ready to purchase high quality carbon credits from our partners' projects.

Relevant project types in the rangelands

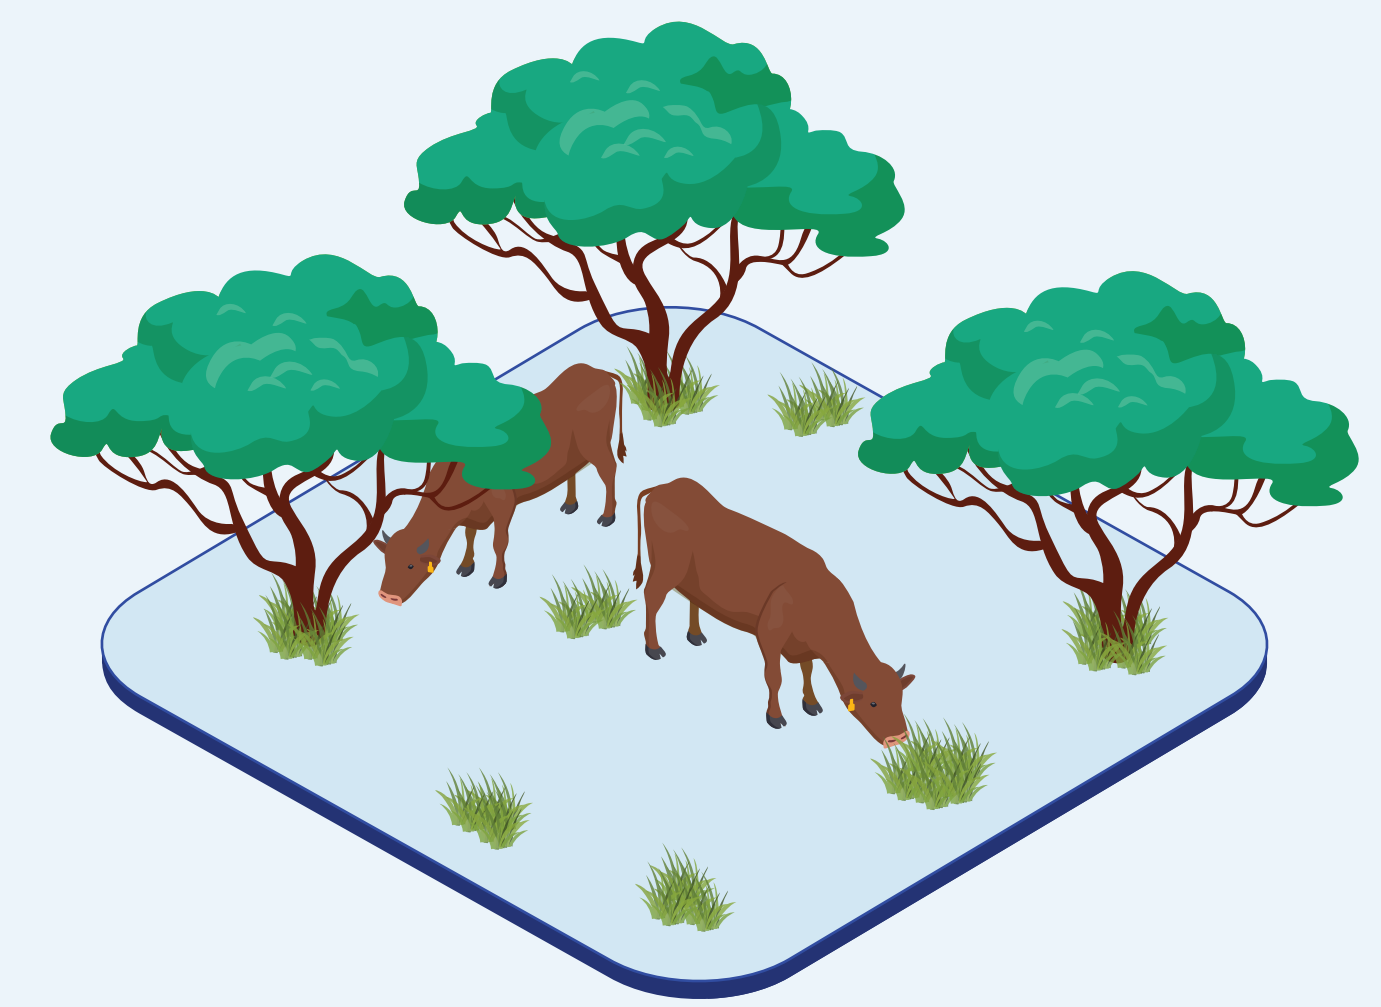

Vegetation

Implement management practice changes to enable native vegetation to naturally regrow or plant native species or mallee eucalyptus to reach forest cover.

Integrated Farm & Landscape Management

'Stacking' different types of carbon projects on the one piece of land. This can improve the environmental and economic outcomes of the property, as well as improving, the commercial viability of projects by reducing auditing costs and increasing carbon credit return.

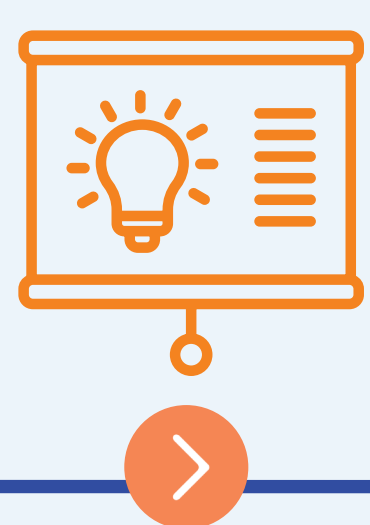

Livestock methane reduction

Reduce enteric methane emissions from ruminants through methane-suppressing feed additives or the implementation of herd productivity measures (e.g. increased water points, fencing, improved genetics).

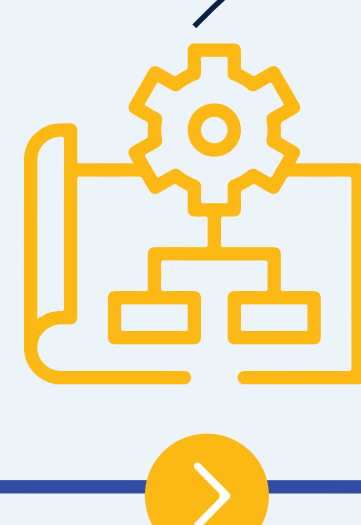

Project lifecycle for your project

We work with you to select an appropriate method that suits your property. We take care of all of the technical and administrative elements of your project including carbon credit calculations, registration with the carbon standard and ongoing reporting and audits, ensuring that you meet the requirements of the methodologies. This enables the project to generate Australian Carbon Credit Units (ACCUs) or international carbon credits.

Project Development

Support to assess technical feasibility, project design, registration and compliance

Implementation

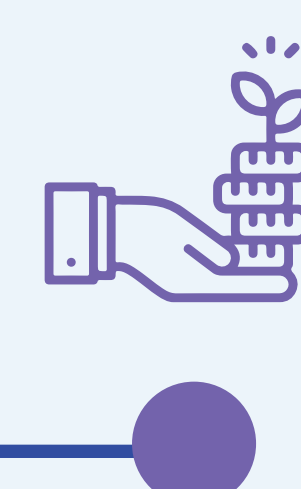

A trusted partner to set up, monitor, elevate and report against project outcomes

continual generation of credits during project crediting period

Retail of credits

Access to an extensive network of voluntary buyers to achieve a premium price for credits

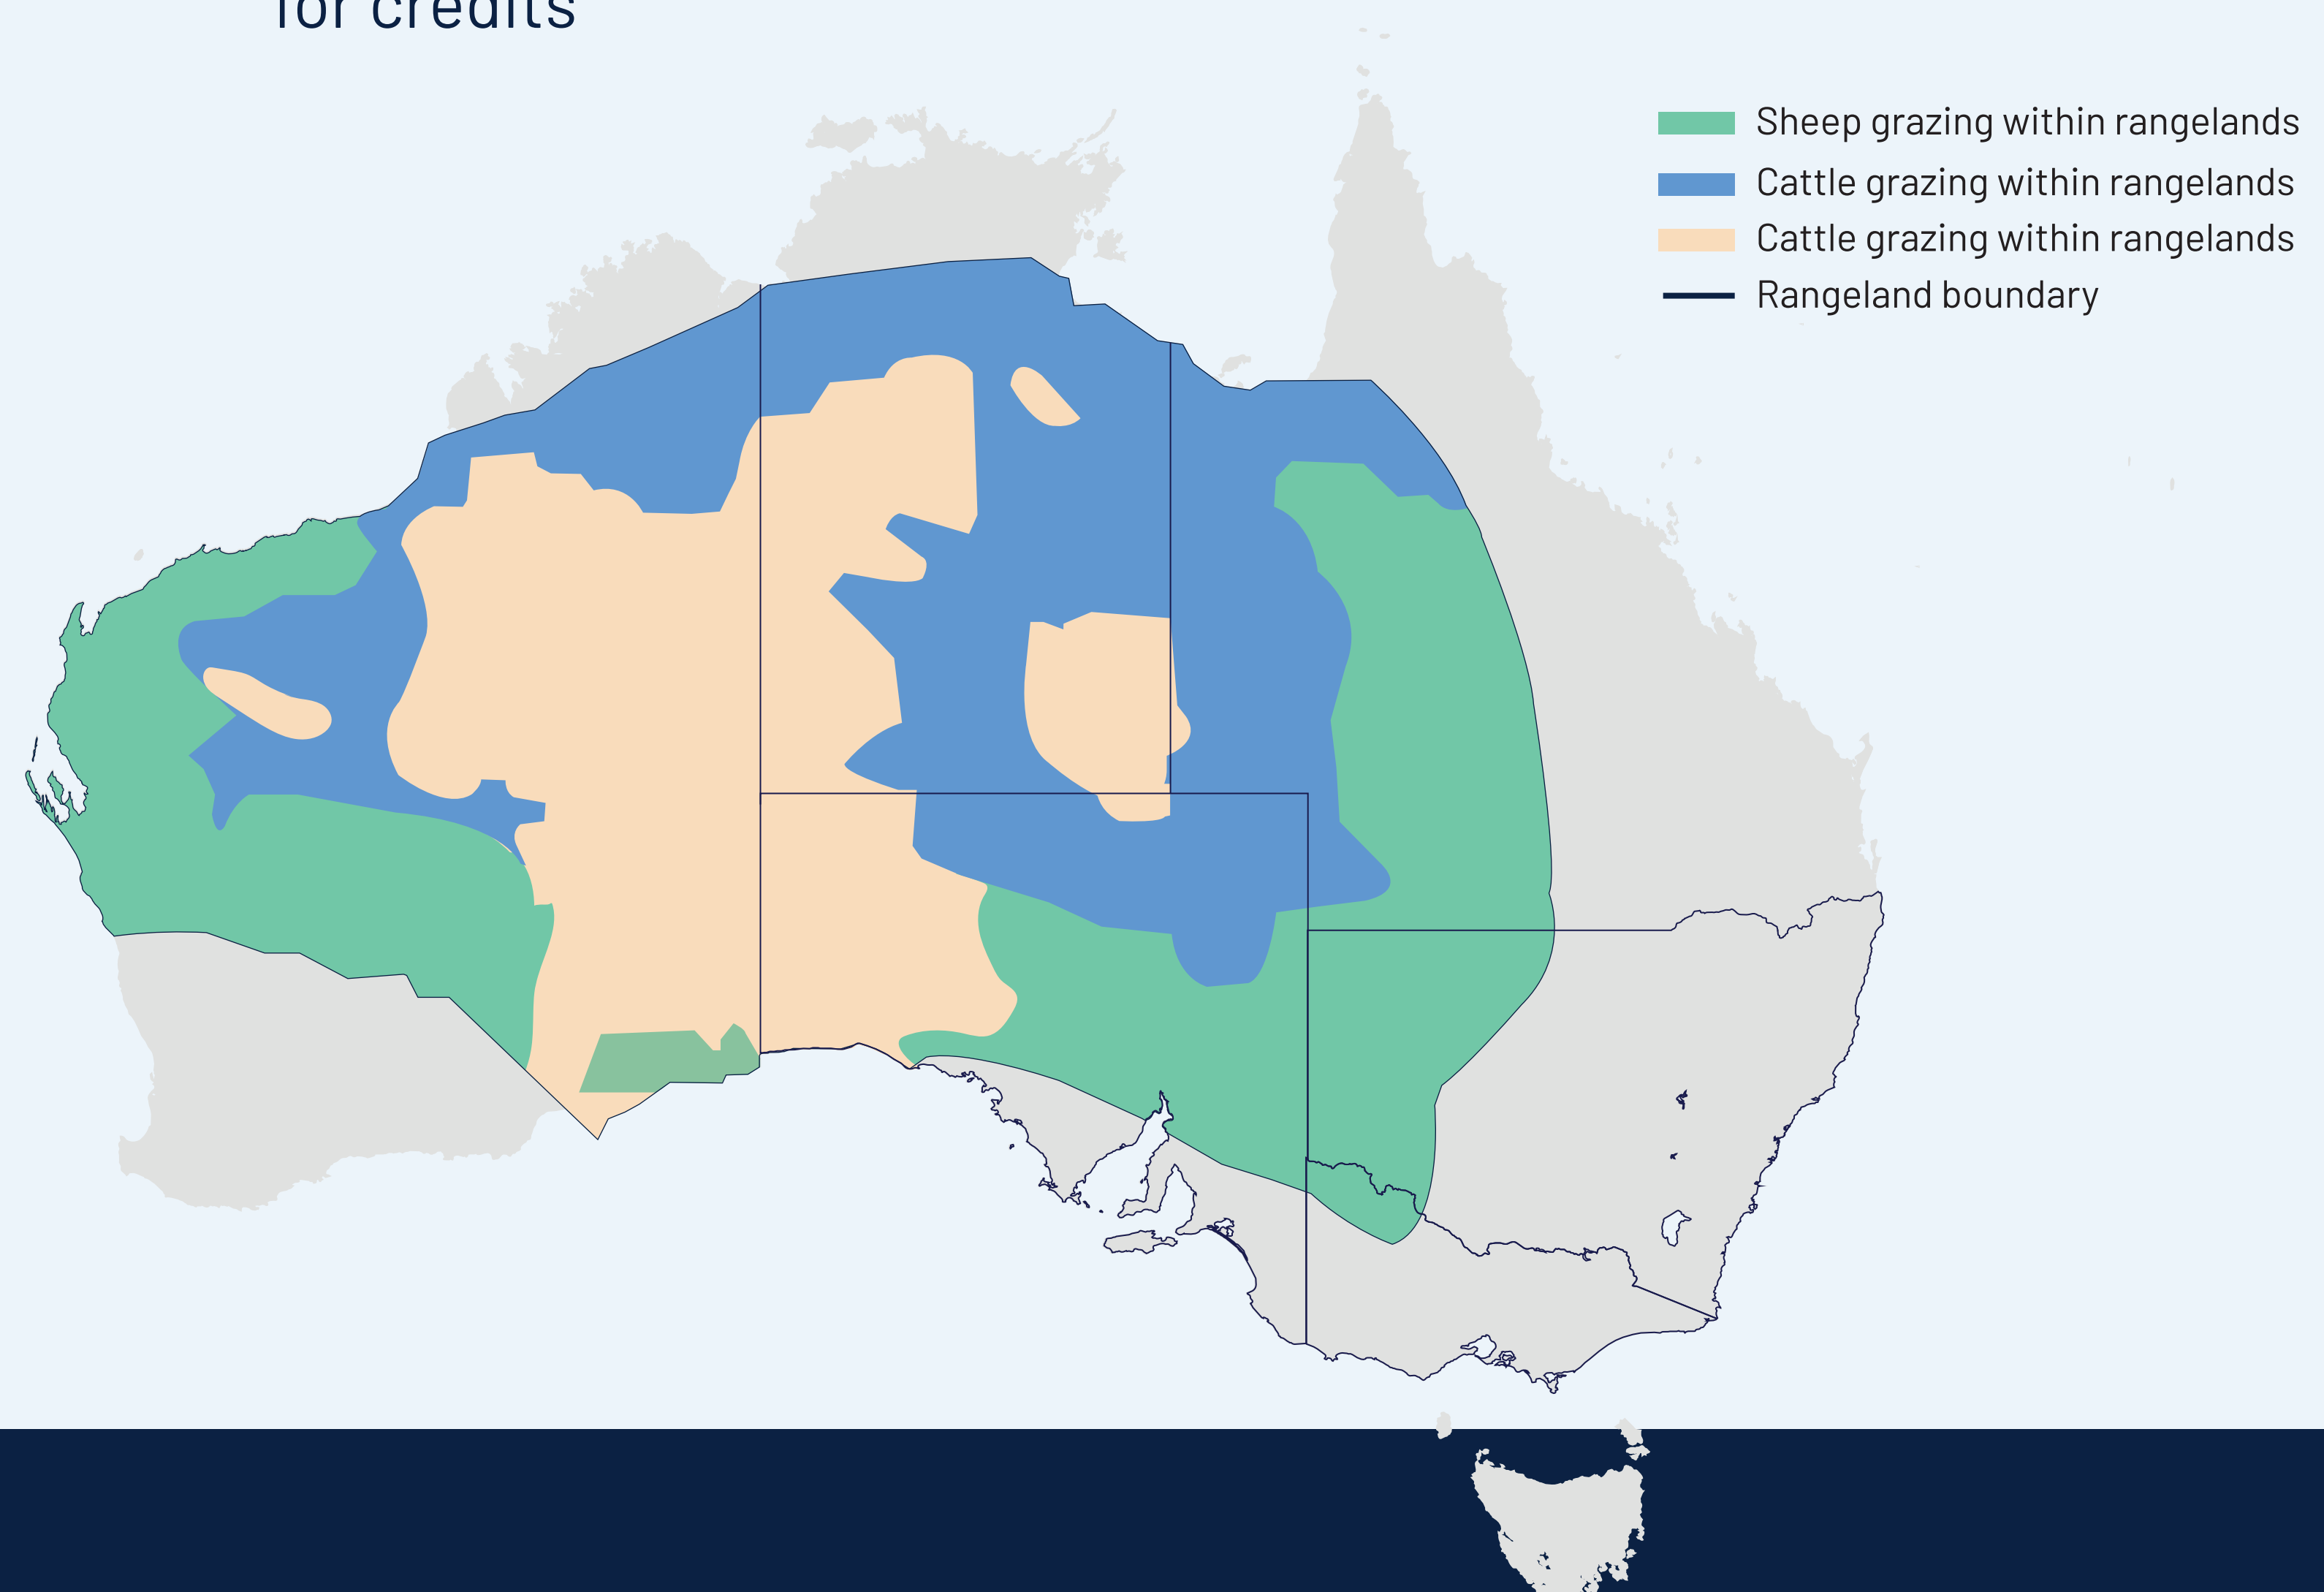

Profit for landowner + developer (South Pole)

Tell your true rangeland management story

Media portrayals have at times cast a shadow over Australian landowners, claiming that they have been overstocking, creating dust storms, causing erosion, harming the land and being solely motivated by financial gains. As a steward of rangelands, you possess a valuable opportunity to challenge this narrative and share the long lasting impacts of your commitment to land management.

Undertaking a carbon project can be an opportunity to showcase your sustainable land management through the marketing and sale of carbon credits. By showing a global community of credit purchasers your true story, you will be leaving a legacy for future generations of families and landowners in the rangelands.
