

## **VISUALISING DNA MATCHES USING NETWORK GRAPHS**

You've taken an autosomal DNA test. You hope that among your DNA matches you find evidence to confirm your research, or maybe even break through a brick wall. But working your way through pages of matches and shared matches is like walking through a maze. This session will introduce free visualisation tools that can map the maze. Learn how network graphs can be used to visualise connections between your matches, and how graphs can be enhanced to assist with your research goals. While focussing on AncestryDNA shared match information, the ideas discussed can be applied to any list of shared DNA matches.
