

# Protecting Against Domestic Violence

Australia's most advanced easy-to-use, reliable,  
and secure duress devices with ongoing local support.

Australian owned and operated mCareDigital works with a number of state government agencies and community care organisations who actively engage in support programs for clients who experienced any form of family and domestic violence. We've been engaged in such programs since 2014.

Our 4G-SIM enabled smartwatch and personal pendant duress alarms have been customised to operate in silent mode thus providing a discreet service in times of emergencies where perpetrators might be in close proximity. Further to that, a Grade 1 support centre available 24/7 provides the necessary care and emergency response following special DV service protocols.
