## Comprehensive procedural solutions from upper thoracic to sacrum

Through X360, a comprehensive lateral approach can be delivered by keeping the patient in a lateral decubitus position. Traditional ALIF and posterior fixation procedures can now be performed laterally from the upper thoracic spine to the sacrum. X360 is supported by three foundational procedural solutions: XLIF, XALIF, and XFixation; which, when applied together, can achieve a powerful and efficient lateral single-position surgery.
