Connecting Assets with People

A modern work management platform that empowers asset management teams to work safer, smarter and realise more value from complex industrial assets.

Connecting assets with people for improved performance and safer operations.

OnPlan's digital asset management platform seamlessly connects your field, workshop, engineering, and management teams. This ensures your operation is compliant and work is executed efficiently and safely. Our solution automates manual processes to save time, reduce errors, and make sure nothing slips through the cracks.

As digital disruptors, we're working to change communication across mining operations by helping break down silos and connect people. Our platform is backed by years of industry experience. This experience has enabled us to create specifically designed features to alleviate pressures across departments, create more productive workforces, and quickly transition your paper-based asset management program to digital.

Leveraging our extensive asset management knowledge, we've invested considerable time and effort in understanding the industry's challenges. We've further collaborated with mining companies to create a comprehensive, purpose-built asset maintenance solution that meets the needs of complex mining assets.

OnPlan transforms asset maintenance knowledge, enabling efficiencies and automation using a modern and scalable software architecture that is easy to use and open; easily connected to ERP's CMMS and other company systems.

Digital inspections delivered through OnPlan

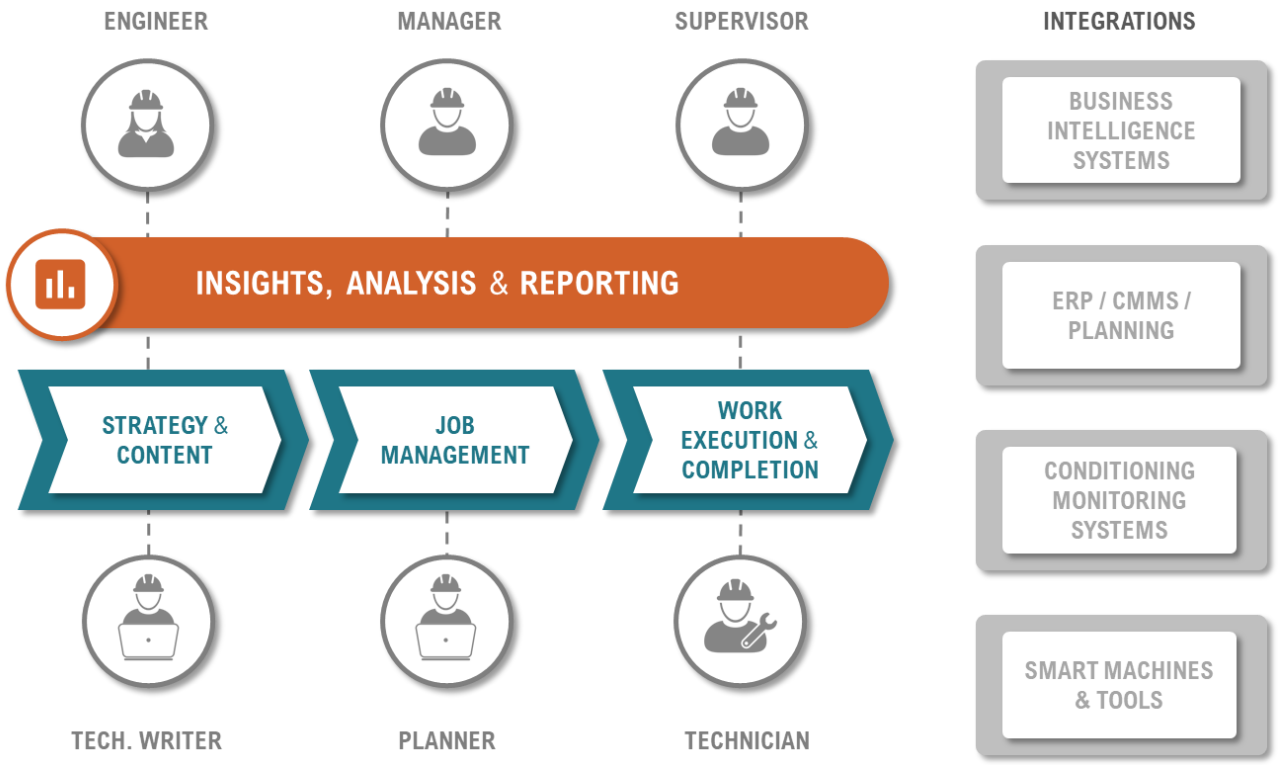
OnPlan: The key to a connected workforce

To keep assets operating optimally, your entire team needs to be connected with accurate and up-to-date asset information.

OnPlan is designed to bring workforces together by allowing easy communication across departments. It closes the loop on updates and feedback, breaking down silos and making sure your asset management teams have access to the latest information, from the office to the field.

A manager wants visibility of asset performance and compliance, a technician needs detailed instructions to do their job well and a supervisor want to see the real-time progress and jobs and ensure their team is working safely.

With OnPlan, each role is presented with information that is relevant to their role, in a format they can easily use. This helps individuals perform better and that provides an uplift for the entire business.



Designed for operators and maintainers of complex industrial assets

Unlike inspection apps and form-based tools, OnPlan is designed to meet the requirements of complex industrial assets – from strategy to execution. Our deep asset management expertise and pioneering work alongside sophisticated asset operators such as Glencore, BHP and Newmont has resulted in a solution purpose-built for mining assets. Our solutions are also modern, easy to use and open meaning they can easily connect to your ERP, CMMS and other asset systems.

Owners of sophisticated assets know the difference

Asset-centric data structure
Supports complex assets
Field tested, production ready
Sophisticated work-flows

Deploy quickly and realise value sooner

Best-in-class content builder
Document importing solutions
Content automation tools
Reduced the time-to-value

Flexible, easy to use and collaborative

Share information
Complete tasks quicker
Link to asset strategy
Collect data in the field

Manage Risks **Reduce Costs** **Increase Reliability**

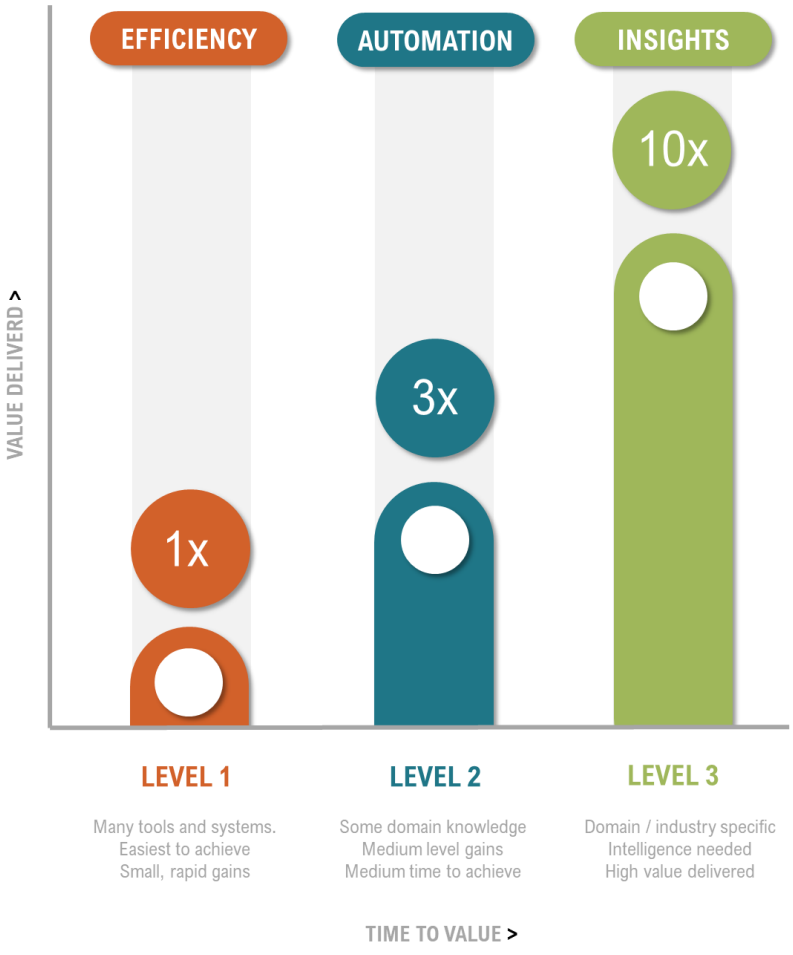
Lead your asset operation into digital transformation

Now more than ever, companies are feeling the pressure to join the digital transformation process the mining industry is undergoing and transition their operation to digital. Technological innovation is creating greater efficiencies, improving communication, and shaping trends for the future in mining.

And a crowded marketplace makes choosing the right tool challenging. Many only meet the requirements of part of the business. Our commitment to clients is to provide an asset maintenance tool that meets the specific requirements of complex assets, so you don't compromise on capability.

Only with a targeted, industry and domain relevant tool like OnPlan can your organisation realise the significant high-value benefits of digital transformation.

A targeted, industry and domain specific digital transformation tool



Our Company

OnPlan Technologies is an experienced asset management and digital partner

As the creators of OnPlan, we've experienced many of the challenges technicians, supervisors, managers and engineers all currently face in the workplace today. Having worked on site as maintenance practitioners as well as technologists and engineers, we knew there had to be a more efficient way of completing work, reducing risk, improving safety and compliance, and meeting the needs of complex assets to achieve optimal productivity and long-term success.

We started small by building asset maintenance tools for our own use. Customer demand for a commercial work management software product gave us the confidence to trial, test and successfully launch our solution that is diminishing man hours creating asset maintenance work instructions and transforming operations into safer, more efficient, reliable and predictable workplaces.

> ***"We've visited hundreds of industrial asset operations and seen first-hand the challenges technicians, engineers and managers face to keep assets operating effectively and safely around the clock."***

Customer Success

Redpath Mining

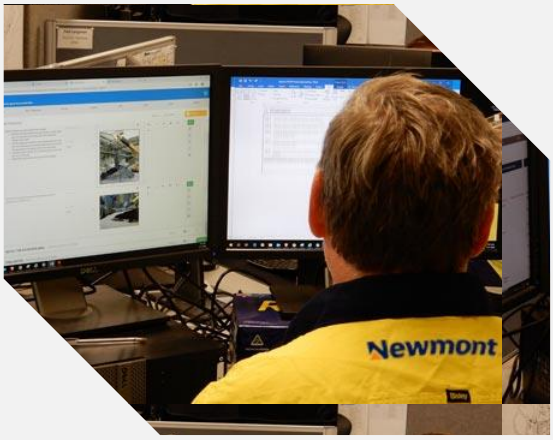
Redpath are a large underground mining contractor operating in Australia and North America. To speed digital transition for their Australian underground mines, Redpath deployed OnPlan in 2020.

The OnPlan digitisation project reduced job preparation time and eliminated paper from the work management process. Technicians can now focus less on paperwork and more time on getting the job safely and efficiently.

Glencore Clermont Mine

Transitioning maintenance documents to a digital format using OnPlan software sped work instruction development and ensured standardisation and consistency for Clermont's technical writers and engineers.

OnPlan has now provided Clermont with a solid base of quality technical content to drive further safety and efficiency improvements into their work management processes across the mine.



Boddington Gold Mine

A step-change in work instruction and inspection development efficiency plus the rapid conversion of 2,000 legacy documents made OnPlan work instruction software an easy choice for Newmont's process plant technical writing team.

Using OnPlan since 2019, Boddington has realised new levels of efficiency and quality of their many maintenance documents used to execute work in their gold processing plant.
