

cycling desert

: an area that has limited access to cycling infrastructure.

food desert

: an area that has limited access to affordable and nutritious food.

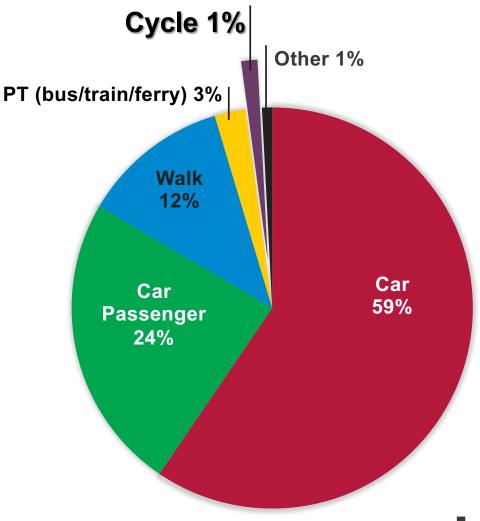

Why study this?

- Find areas that have no cycling infrastructure
- Evaluate the equity of the existing cycling network
- Better target for new cycling infrastructure = more people cycling, less carbon & obesity

NZ Overall Trip Mode Share

Separated Cycleways

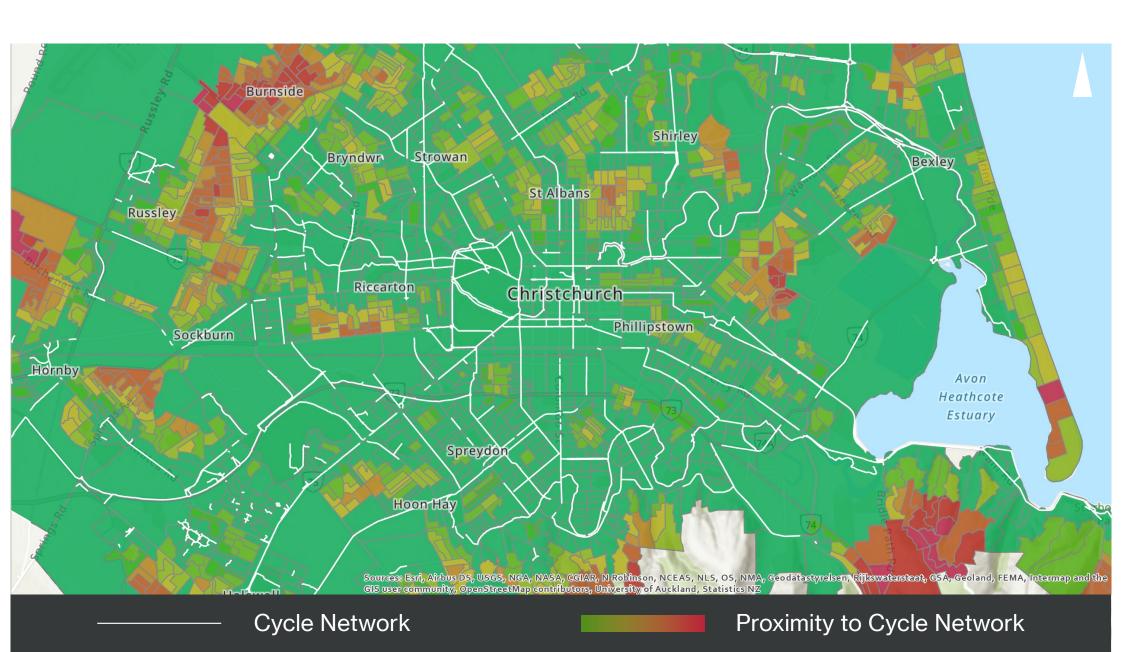

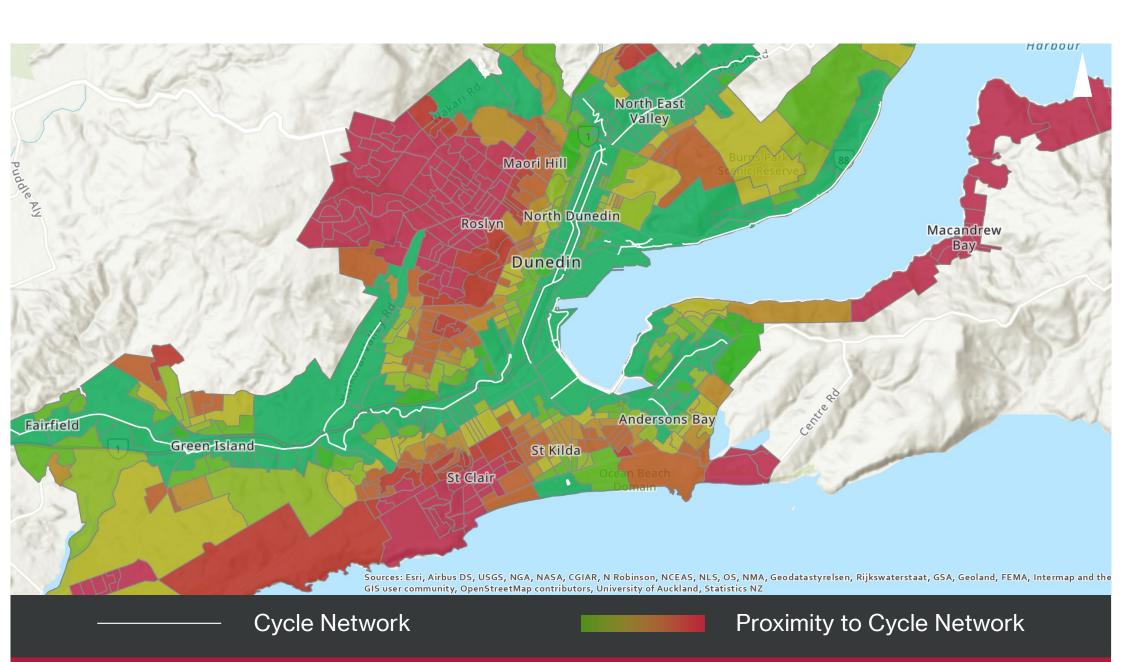

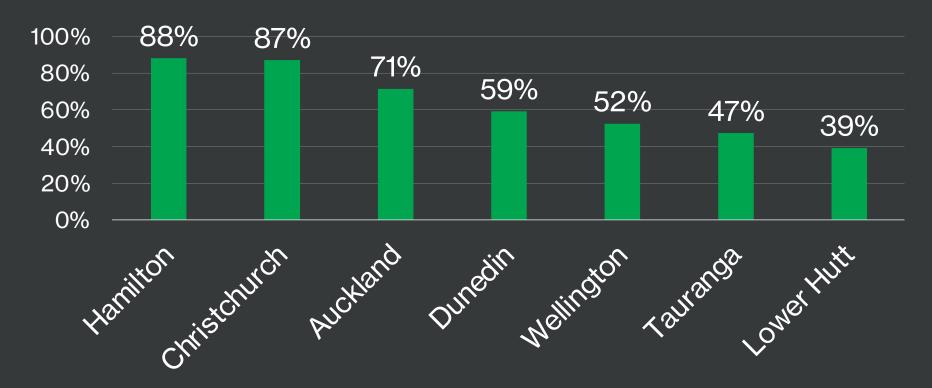

Cycle Network

Proximity to Cycle Network

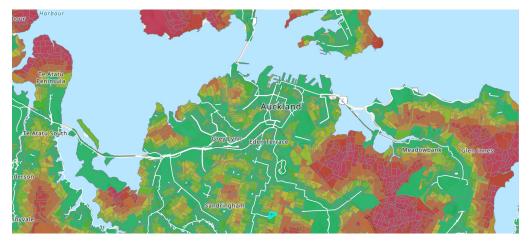

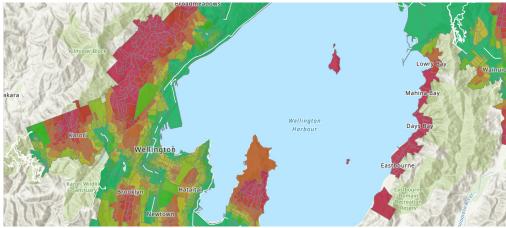

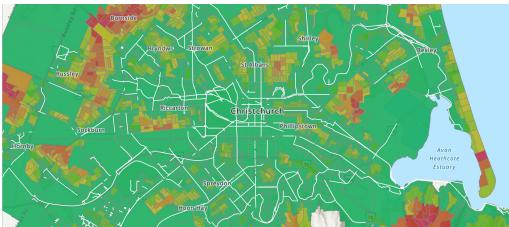

% of Population Residing Within 500m of Cycleway

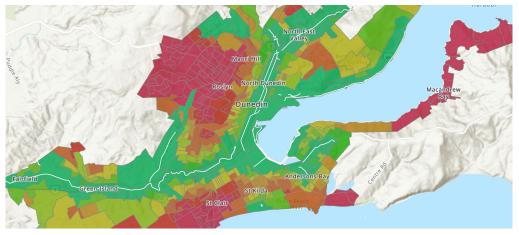

The New Zealand Index of Multiple Deprivation (IMD)

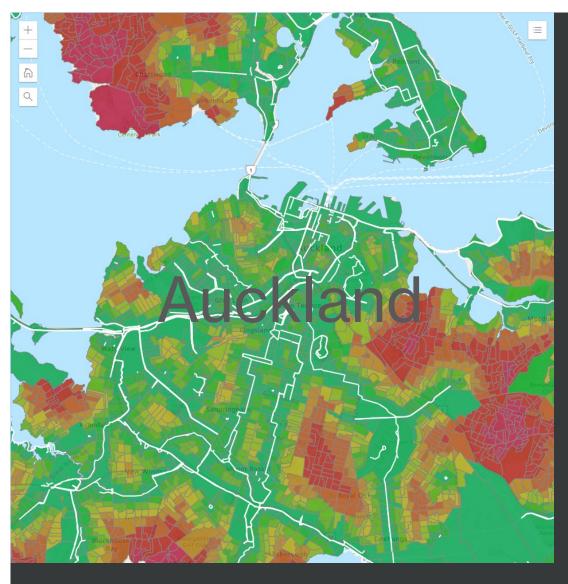

The 7 Domains of Deprivation

- Employment
- Income
- Crime
- Housing
- Health
- Education
- Access to services

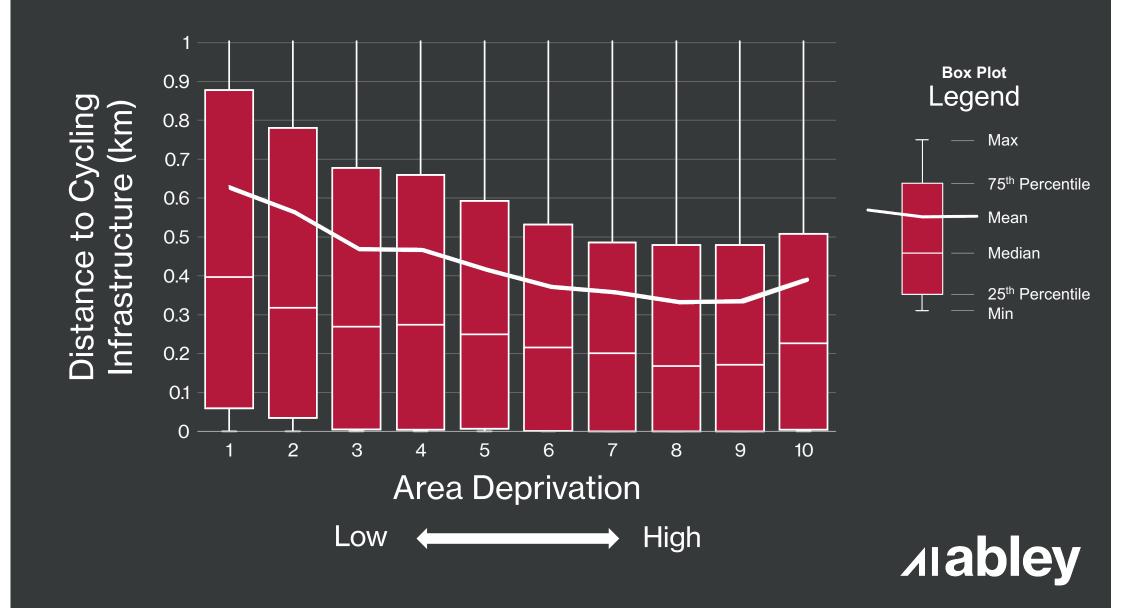

What if we could see deprivation data side by side

Proximity to Cycle Network

Deprivation

Are cycling deserts correlated with high deprivation?

Future Opportunities

- Create a historical slider map comparing the impact of future cycle network expansion
- Combine and compare with journey to work and/or school data
- Expand cycling oases to include low speed environments

Thank you!
