

## Cloud-based Robotic Solutions for Making Water Quality Measurements

### About TracWater

TracWater is an Australian company launched in 2013. TracWater was awarded a place in the Top 10 APAC Utilities Technology Solution Providers in 2017. Our knowledge of wireless, cloud-based water measurement and verification is second-to-none. It represents a decade of dedicated cloud water monitoring research and manufacturing and real-life experience from “plug and play” cloud water quality solutions in Australia, Asia, North America and Europe. We design, build, own, and operate some of the smartest cloud-based utility cost-reduction systems which we make globally accessible to our clients and partners. We are always working on new water quality algorithms, automated learning, and new ways of managing information streams to help our customers.

TracWater can help you with all sorts of affordable and clever cloud-based wireless solutions for water, power, gas, compressed air, equipment condition monitoring, pump management, tank level management, and more!

### Our Products

TracWater will showcase self-powered cloud-based robotic solutions for making water quality measurements from remote sites anywhere on a potable water distribution network. Our products and solutions have been in non-stop operation 24/7/365 on water utility networks in Australia and S.E. Asia since 2016. Our economical patented cloud-based solutions and water quality analyzers are self-contained and do not need any connection to main power to operate. Some TracWater units are fully portable and can be easily moved between countries and intra-country by air, road or river and are “plug and play” when connected to a water sampling source.

Contact TracWater first for your water monitoring solutions.

### Interactive Session

25 October, 11:00–11:30 a.m.  
(GMT +8, Manila time)
