

SUEZ Smart Solutions for NRW Reduction and Control

About SUEZ

SUEZ provides innovative and resilient solutions in water management, waste recovery, site remediation and air treatment, optimizing municipalities' and industries' resource management through "smart" cities and improving their environmental and economic performance. By 2030, the Group is targeting 100% sustainable solutions, with a positive impact on our environment, health and climate.

At SUEZ, being committed to preserving the environment and fighting climate change, we recognize the importance of taking action against water losses now.

As an operator, we understand the difficulties of water companies in delivering the best possible services while maintaining financial sustainability. We partner with our clients to achieve their goals in Non-Revenue Water (NRW) reduction, through multiple smart technologies developed to enhance the water network performance and optimize capital and operational expenditure.

Our Solutions

We'd like to introduce four of SUEZ's products which can be adopted by water companies to tackle their issues with NRW:

- Spot Leaks – predict, detect and locate leaks with a combination of data analytics and advanced inspection technologies
- Calm Network – regulate pressure in the network to reduce leaks, bursts and maximize the lifespan of the asset
- Net Vision – optimize a pipe renewal plan with AI and field inspection to save capital expenditure
- Opti Revenue – reduce commercial loss with machine learning algorithm

Interactive Session

18 October, 1:00–1:30 p.m.
(GMT +8, Manila time)
