

Solutions for Hard-to-treat Organic Waste and Wastewater

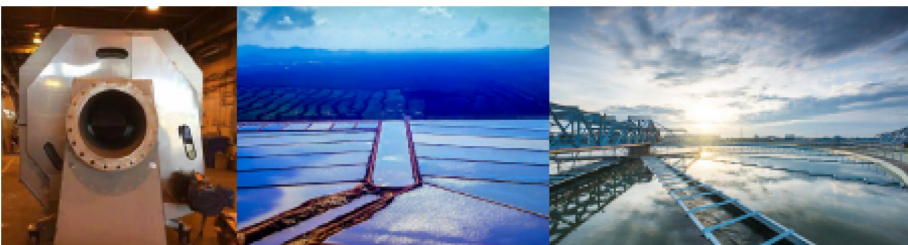

About Us

TradeWorks Environmental (TWE) offers solutions for hard-to-treat organic waste and wastewater, including specialized microorganisms, screening equipment, and analytics support.

Our Solution

These solutions integrate seamlessly into existing systems to avoid capital expenditure while achieving significant performance improvements. Improvements have been shown across a wide range of global use cases, such as enhanced degradation of organics in composting and lagoon-based treatment applications; improved nutrient removal and reduced sludge production in wastewater treatment facilities; increased biogas yield in anaerobic digesters; and reduction of H₂S, corrosion, fats, oils and grease buildup, and odors in sewer collection systems.

With a global network of distribution partners, TWE is well-positioned to meet circular economy and sustainability imperatives with scalable solutions for municipal or industrial waste and wastewater treatment service providers seeking energy, performance, and cost benefits.

Interactive Session

21 October, 11:00–11:30 a.m.
(GMT +8, Manila time)
