- Experienced global workforce
- Offers flexibility through capital purchase, build own operate or rental options
- Backing of strong shareholder as investor and project partner

World class water

Osmoflo is a progressive water treatment company that provides tailored, turn-key water and water recycling/reuse solutions across the industrial, resources and municipal sectors globally.

Osmoflo is the largest Australian based designer and builder of desalination projects, with offices in the UAE and India. Osmoflo have an enviable track record of providing successful, affordable, high technology water solutions dating back to 1991.

Water is life and every day our water treatment systems are vital to the wellbeing of thousands of people around the world. Since establishment Osmoflo has specialised in the design, build and operation of over 500 reverse osmosis desalination plants.

A complete project solution from inception to operation is supported by technical expertise as well as the spare parts, consumables and chemicals needed to keep your plant fully operational. Combined with our flexible purchase options this means we can tailor the right solution for you.

Our plants are located around the world at remote mine sites, oil and gas fields, power stations, city breweries, townships and coal seam gas fields - wherever there's a need for drinking, process, high purity or recycled water.

The hub of our business activities is located at Burton in Adelaide's northern suburbs. This world class facility is the largest in the southern hemisphere dedicated to the design and fabrication of water treatment systems.

Osmoflo's shareholder consists of Japan's Hitachi Zosen Corporation, who partners with Osmoflo to pursue water projects across the globe. Our shareholder facilitates access to their global network, provides specific project support and delivers the additional commercial capability that enables Osmoflo to join the small number of international water companies capable of delivering very large desalination projects.

World class facilities

Our people

Having the right people in the right jobs is fundamental to the success of any organisation. At Osmoflo we also seek out potential employees who can add knowledge from the world sphere. This policy helps us maintain a perfect balance - global know how and local experience.

Our culture

The Three C's:

- Conversations: We talk with each other as our preferred mode of communication
- Collaboration: We collaborate with, and support, each other, as "One Team" to come up with the best outcomes
- Commitment: We make commitments to each other and we meet them.

Our differentiators

The Three R's:

- Recovery: We work creatively to design, build and operate innovative and reliable plants which optimise recovery and freshwater production
- Relationships: We seek to build long lasting working relationships with our customer based on exceptional performance and mutual trust, that maximises our clients value for money
- Responsibility: We guarantee and take full and ongoing responsibility for every water solution we provide - we have never walked away from an Osmoflo customer and we never will.

Burton, South Australia Headquarters

An invitation

"Osmoflo are first class experts in the discovery and development of innovative desalination, water recycling and water reuse solutions. With projects completed around the world, we are a true global player in the water industry.

Looking at the future with Osmoflo, it is a privilege to lead such a progressive company, and a global team who have expert capabilities and experience.

I sincerely invite you to contact me or any of our team if you would like to know more about Osmoflo and how we can help you"
