

# Water from Air

## About Us

GENAQ is part of an industrial group that possesses more than 30 years of experience designing and manufacturing HVAC and refrigeration units. Our group, with more than 40M€ in operating revenues, gives us the financial and industrial capability to be able to face higher production levels than our competitors. Since 2008, GENAQ has been investing in the research, development and industrialization of atmospheric water generators, offering the market a variety of water generation units, as well as customized developments for specific needs. As a result of this development, the 4th generation of GENAQ water generators is already in operation in more than 45 countries around the world (US, Africa, South America, Middle East, etc.)

## Our Solutions

At GENAQ we are makers, designers and water solution providers through our Atmospheric Water Generators (AWG), an innovative solution that produces high-quality drinking water from the air's humidity. We replicate the natural process of the rain by condensing water from humidity contained in the air via a refrigeration technology.

We have different models that can produce from 50 liters/day to 5000 liters/day. We offer a reliable solution for water supply that is economical, efficient, portable, has low energy consumption and low cost per liter, and has a minimum environmental impact.

GENAQ technology is already being used by Armies and Emergency Response Units (USA, Malaysia, Nigeria, Saudi Arabia) and border services (SENAFRON, Panama). We have been also present in Hurricane María in Puerto Rico as an emergency response for water supply, and in several Development projects.

## Interactive Session

22 October, 4:30–5:00 p.m.  
(GMT +8, Manila time)
