

From a Garage Startup to a Global Technology Leader

Digital monitoring systems to protect drinking water

About Us

Our success story began in 1948 with an idea for a revolutionary pipe connection for drinking water pipelines. The Hawle Austria Group is now a manufacturer and distributor of top-quality heavy-duty valves. These products have been manufactured for generations and are used all over the world from the source right through to the connection in the house.

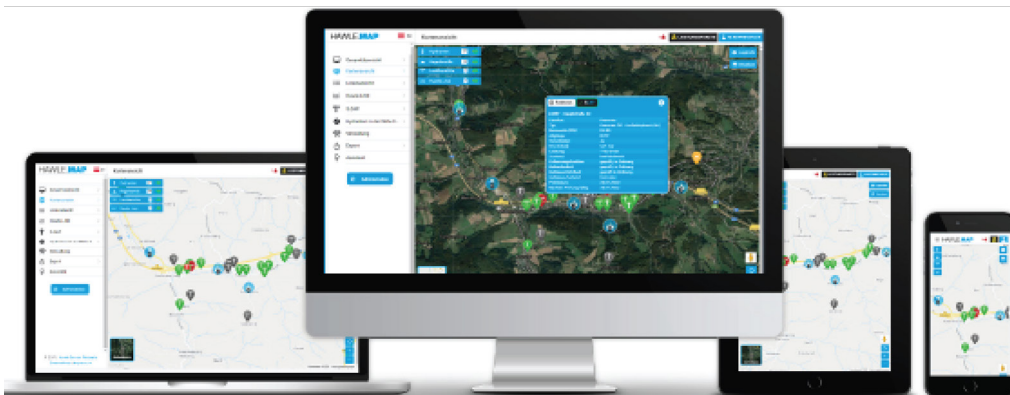

Hawle Austria aims to provide user-friendly, innovative, and customized solutions. For an innovative company like us, developing and enhancing the digital product range for the drinking water supply is the obvious thing to do. Our focus is on the digital monitoring systems that help to protect our drinking water. Development is guided by the benefit it brings to our customers.

Our Solutions

S.CAP – This technology offers smart, remote monitoring so that hydrants are constantly checked. Intelligent electronics collect and record all activity at the hydrant. Water theft, contamination, and pollution of drinking water pipelines are kept well under control.

Hawle.LIVE - This technology monitors water supply systems without costly control equipment. With a simple installation, it can define the water level, water meter console, flow rate, water pressure, and door contact. No software needs to be installed. The system raises the alarm if values fall below or rise above the settings.

Hawle.MAP - Being able to check the condition of hydrants without having to be there is just one function of Hawle.MAP. This innovative platform includes all the information you need on the position of the hydrants, valves and control valves, as well as air release valve leakage reports. Important functions for firefighters, such as navigation to the next hydrant are also integrated. It also includes information on pressure and extinguishing water output.

Interactive Session

22 October, 4:30--:00 p.m.
(GMT +8, Manila time)
