About Paani Doctor App

- **PAANI** DOCTOR App is the first of its kind mobile-based app developed in sector of water quality management by Eco Concern Pvt. Ltd., Nepal which digitally serves client with water quality testing service and treatment products while maintaining highest quality of service and products.
- With this app, you can have drinking water at your home tested in laboratory and get reports delivered online. You can also get our Water, Sanitation and Hygiene (WASH) products delivered to your doorstep through this app. Water treatment products (like Piyush, Piyush Colloidal Silver Candle filters), water testing products (P/A vial, ECC vial), rainwater filters are our few products among many others.

ABOUT ECOCONCERN

Eco Concern Pvt. Ltd. (EcoConcern) is a social business enterprise actively working in the water and sanitation sector. We promote delivery of safe, ecofriendly and affordable water and sanitation innovations to benefit consumers and communities in Nepal. We are also a strategic partner of Environment and Public Health Organization (ENPHO), a reputed NGO promoting safe water and environment in Nepal for last 29 years. we also provide laboratory services through ENPHO Laboratory. Furthermore, We provide water testing kits, water treatment products and services for treating waste water and fecal sludge.

ABOUT ENPHO LAB

ENPHO Lab has been providing its analytical services on water, air, soil and food quality since its inception in 1990 A.D. Eco Concern Pvt. Ltd. is handling the management of the ENPHO Lab since 2016 A.D. ENPHO Laboratory has been accredited under the NEPLAS criteria (based on ISO 17025) by Nepal Bureau of Standards and Metrology, Government of Nepal. Laboratory division of ENPHO is well equipped with sophisticated instruments like atomic absorption spectrophotometer (AAS), ultra violet (UV) spectrophotometer, double distillation unit, four digital electronic balance, pH meter, electrical conductivity meters, automatic digestion and distillation units, and various types of oven, incubator, and furnace for physical and chemical parameter analysis. Furthermore, it is equipped with several filtration units (Millipore and Del Agua units), different range of incubators, autoclave and refrigerator for microbiological analysis.
