

THE HALL TECHNIQUE

ONE SNAP AND IT'S DONE!

Presented by: Andrea Maguire

2 CPD HOURS

Course Outline:

Hu-Friedy are excited to offer a brand new workshop on the Stainless Steel Crown Hall Technique. This workshop will teach you how to place stainless steel crowns on deciduous molars without the need for local anaesthetic or tooth preparation. Topics include the theory behind the Hall Technique, case selection, and practical hands on instruction. If you are looking to update your skills or just need a refresher this is the workshop for you!

This workshop will cover the following areas in detail:

- Background of the Hall Technique – a proven method for managing caries and hypomineralised deciduous dentition in young children
- Evidence – how does the Hall Technique compare to conventional restorative techniques
- Careful case selection - Treatment planning and consent for the Hall Technique
- Contraindications for use of Hall Technique
- Fitting Hu-Friedy stainless steel crowns – hands on instruction for choosing the correct sized crowns and how to place them on deciduous molars

Participants will be able to:

- Improve patient compliance
- Reduce patient anxiety associated with dental treatment
- Perform the Hall Technique with confidence
- Achieve better health outcomes for paediatric patients

This course is suitable for:

- Experienced Dentists, Oral Health Therapists, Dental Therapists who are looking to update their skills
- New graduates (Dentists, Oral Health Therapists & Dental Therapists)
