"Are the courts a location or a service?" Dr Richard Susskind, Chair of the Advisory Group on Online Dispute Resolution for the Civil Justice Council (UK)

What is the ‘cultural glue’ that will hold the emerging networked world together?" What, asks Manuel Castells (The Rise of the Network Society, 2010) is the ‘ethical foundation of informationism’? [p. 213]

“The unit is the network, made up of a variety of subjects and organisations, relentlessly modified as networks adapt to supportive environments and market structures. What glues together these networks? Are they purely instrumental, accidental alliances?” [214]

At the G20 summit in Hangzhou, China, it was projected that cross-border e-commerce will involve 2 billion customers by the year 2020. In correlation with the growing number of cross-border commercial transactions, another recent projection is that the number of disputes will continue to rise sharply, reaching a peak of one billion e-commerce disputes annually by 2017, and a million disputes a day by 2020.

“This technology is enabling people to engage in complex, socially contextualized activities in ways not possible before. While it used to be that geography determined the boundaries of a group and the possibilities for collective action – I had to be near you to join you – now technology is revolutionising our capacity for purposive collective action with geographically remote actors [...] New social and visual technologies are emerging to facilitate the work of groups. What was an ‘information revolution’ is becoming a social revolution. As a result, groups will increasingly be able to go beyond social capital building to teamwork.”
