

Uplifting Cyber Resilience and Assurance @Griffith – Our Journey 2021 and Beyond

Griffith’s cyber security journey has been transformative over the past several years, evolving from a single technical resource to a significantly more diversified and distributed model focused on cyber resilience and assurance.

Like other institutions, Covid in 2020 proved to be a disruptive year for Griffith yet one which provided both new challenges as well as new opportunities.

This presentation will outline our recent journey in cyber security and articulate the future strategic vision, explaining how Griffith’s cyber resilience and assurance is being uplifted through risk reduction to protect, maturity improvement to enable and collective engagement to ensure a shared journey together.
