Neobladder reconstruction following radical cystectomy is widely practiced, and it is well accepted by patients for better quality of life. Besides a surgical team, a good quality care, patient education and patient empowerment are necessary to minimize the impact of cystectomy and neobladder reconstruction. The specific care and patient empowerment can lead to optimal functional results and better quality of life. This lecture highlights postoperative considerations for patients undergoing radical cystectomy with neobladder reconstruction. The common issues, potential complications, patient care skills to optimize outcomes are discussed.
