AI in Urological Cancer

Jacob ST Pang MD., PhD

Artificial Intelligence (AI) is everywhere. Learning of AI has been a worldwide enthusiastic movement, its application has been embraced in the industrial and medical field. This hype phenomena will give us a unique opportunity to revolutionize our clinical practice in medical care. From disease diagnosis to treatment, we will experience the impact of this new technology. Here, I will give an overview of the latest development of AI in healthcare and focus on the projects that are involved in urological cancers. In Asia, AI is still at its infant stage, we have ample opportunities to explore this technology for the benefit of our patients.
