- Ayesha Shah, Brisbane
- Peter Gibson, Melbourne
- Phil Dinning, Adelaide
- Nikhil Thapar, Brisbane
- Kerith Duncanson, Newcastle
- Kok-Ann Gwee, Singapore

The Inaugural Australasian Neurogastroenterology and Motility Masterclass is taking place in Brisbane 23-24 February 2024. This two-day event is designed to advocate knowledge sharing, skills development, and contemporary understanding in the field of Neurogastroenterology and Motility. This Masterclass welcomes some of the most respected National and International experts on the subject, bringing fresh perspectives and advanced knowledge about the evolving treatment and research trends within the field.

Across both days, there will be in-depth sessions and discussions about a range of topics including gastroenteric nervous system problems, motility disorders, and the latest non-invasive management strategies for conditions like IBS, gastroparesis, GERD and more. Presentations will focus on both the clinical and pathological perspectives, aiming to provide holistic and comprehensive content for attendees.

Renowned guest speakers will share their original research findings and engage in knowledge-packed panel discussions. Technical workshops will offer demonstrations to impart practical skills concerning cutting-edge therapeutic techniques.

This event is intended to help a broad spectrum of professionals including gastroenterologists, primary care physicians, and allied health staff. Nurses, junior medical staff, and students will find it rewarding as they get up-to-date with contemporary practices in the industry. The grandeur of the event is built around facilitating attendees to meet experts, grasp useful insights, and network with peers, thus creating a more collaborative and informed environment within the field.

Additionally, there will be special discussion sessions or workshops specifically tailored for junior staff and students, helping them to better understand the more complex practices and pathophysiological concepts. Interactive Q&A sessions will be held to satisfy intellectual curiosities and to tackle complex aspects of the field in real time.

The Australasian Neurogastroenterology and Motility Masterclass is indeed a great avenue to foster advancements in clinical practice and research with an unparalleled opportunity for professionals and students alike to enhance their understanding and skills in the field.
