

ReDA

World-class Research Studies
are what shape our lives

ifonetica

Powering the Research of Tomorrow

At Infonetica, we believe in empowering the people behind these studies with pioneering software solutions that support the ground breaking research of tomorrow

Discover ReDA

Clinical trials can include thousands of participants and operate across multiple geographies. Yet, the complexity of overseeing, managing and reporting on this process carries a heavy administrative burden.

ReDA is a cloud-based Clinical Trial Management System that brings a simple end-to-end solution for set-up, recruitment, compliance, budget control and performance reports, while giving you visibility over multiple trials.

What challenges do clinical managers face today?

Despite the complexity of their work, many organisations are still using paper-based, Excel or basic software systems to manage the clinical trial process. These present a wide variety of challenges: oversight of multiple trials is difficult; there are barriers to access when off site; data may need to be entered many times; deadlines are missed and human errors occur.

Due to these significant challenges, the work of administrators and researchers is labour intensive, time-consuming and rarely cost efficient. For those using systems that are not built around their needs, wastage is high and confidential data is insecure.

Empowering researchers to focus on what matters most:

Having spent more than two decades pioneering software systems that streamline the critical work of researchers all around the world, Infonetica has an in-depth understanding of these challenges - and how they can be overcome.

Our Clinical Trial Management System allows you to gain full control of your studies with a scalable solution for the complete cycle of your trial.

SET UP

- Fast-track study set up
- Conduct site feasibility checks
- Manage budgets
- Oversee complex organisational networks

MANAGE

- Control multi-site trials with complete visibility
- Easily recruit trial participant
- Manage participants visits
- Collaborate with stakeholders
- Track milestones and ensure compliance

ADMINISTER

- Get centralised control over all trial data
- Manage access and maintain privacy
- Allocate costs and track expenditure
- Configure the system to suit your needs

REPORT

- Receive detailed insights on performance
- Report key milestones in real-time
- Share public-facing trial information
- Guaranteed high-level, cloud-based security, reduced paper waste and more successful outcomes

Making it work for you:

Our proactive team of specialists are with you every step of the way to help you implement ReDA quickly and easily, without further IT training. Here's how it works:

TRAINING

We'll train
your team

CONFIGURATION

We'll configure
ReDA
to your needs

MIGRATION

We'll support you
as you migrate any
existing data

GO LIVE!

You're ready to
maximise efficiency
and accuracy with
your customised
solution

In action:

NHS Research Scotland

NHS Scotland operates 14 territorial boards, seven non-geographic health boards and Public Health Scotland. NHS Research Scotland (NRS) is a partnership of Scottish NHS Boards and the Chief Scientist Office (CSO) of the Scottish Government, working to ensure NHS Scotland provides the best environment to support clinical research. They operate a full spectrum of around 1,500 clinical trials at any one time, with around 35-40k recruits per year.

Lacking a united data source, this process was time-consuming and inefficient.

Since 2008, the NHS has used ReDA to run around 1,500 clinical trials at any one time, involving up to 40,000 participants a year. ReDA has given the team centralised control over all trial data. Thanks to its robust approach to clinical trial management, it has also given the NHS valuable clarity in terms of Key Performance Indicators.

“

ReDA has proven to be a robust and easy-to-use system for NHS Research Scotland. Since inception it has helped drive improved governance and data capture with Infonetica providing flexible and reliable support.

We run the full spectrum of clinical trials. Having a united data source for the entirety of clinical research going on in Scotland provides invaluable Management Information.

Ian Anderson
NRS-CMT/NRS Information Service Manager, NHS Research Scotland

”

About Infonetica:

Infonetica was founded in 2002 to support the UK National Health Service. Since then, we've pioneered an eco-system of user-friendly software solutions that transform the vital work of researchers – all around the world.

Built by experts and tailored by you, our pioneering products are supported by a team who are passionate about pushing the boundaries of possibility and make your working life easier. Proactive, energetic and always on-hand, we pride ourselves on giving you ongoing support to ensure you get the most out of our software solutions.
