of  
Fish Pathologists

# Open Workshop : AMR in Aquaculture

At the next EAPF congress, it is proposed to hold a workshop on AMR in aquaculture. You are cordially invited to submit abstracts on the topic of antibiotic resistance in aquaculture, covering *methodological aspects*, *field studies* and *other topics* related to AMR in aquaculture.

As an introduction to the WS, we propose to give provide feedback on the results to date of transnational efforts to define epidemiological cut-off values (ECV or ECOFF) for *Vibrio* and a range other aquatic bacterial species, following the workshop that was held at the EAFP conference in Porto in 2019. After this a round table is planned where these and other important issues, particularly regarding development of surveillance programmes for AMR in aquaculture, can be discussed. Please feel free to provide ideas for discussion

Workshop organizers:

Sandrine Baron\* (ANSES, F), David Verner-Jeffreys\* (CEFAS, UK), Peter SMITH (Galway University, IR) *et al.*
