

## **S14 IMAJINE Project: Regional Economics at Local Level**

**Convenor(s) Ana Vinuela; Paolo Postiglione**

The main reason explaining the limited number of empirical papers on Regional Economics at a higher level of disaggregation than NUTS 3 regions in Europe is the lack of appropriate data. With the aim of promoting public knowledge and understanding of territorial inequalities and spatial justice, this special session will focus on one of the aims of the IMAJINE Project: to analyze the spatial heterogeneity observed within the regions of different sources of economic inequality such as, among others, productivity, employment, wages, human capital and natural resources, which will undoubtedly lead to different spatial economic growth patterns within countries and also within regions.
