

**Title: Consequences of the Russia-Ukraine conflict on tourism: Is energy a problem?**

**Authors: Jesús Manuel de Sancha Navarro, José Antonio Molina Toucedo, Inmaculada Crespo Morán, María Martínez Castro.**

**Abstract:** The recent conflict between Russia and Ukraine, aside from being resolved, is causing a general rise in prices of certain energy resources. This study aims to examine what the short-term consequences are and will be at the tourism level, through opinions collected from experts and data published in the sector. We believe that this will cause an increase in the prices of hotel reservations, which may lead to a decrease in demand for this coming summer 2022. Likewise, the high energy dependence of gas-producing countries may lead to greater awareness at a global level about the use of renewable energies, in order to limit this dependence in favor of cleaner and more durable energies, and thereby be able to promote more sustainable tourism.

**Keywords:** Sustainable tourism, renewable energies, Russia, gas.
