

Special Session Proposal ERSA 2019

“Spatial CGE, land use and transport modeling”

Convenor(s): Tomoki Ishikura (Tokyo Metropolitan University), Atsushi Koike (Kobe University)

Description:

Transport projects and urban/regional policies will influence to spatial interaction of multi-regional economy. Damage to transport infrastructure also influences the picture of economy. Integration or combination of Spatial CGE models, land use models and transport models play substantial roles to measure the effects of above issues. Increased attention is being paid to performing quantitative economic evaluations of transport projects using above models, not only in Europe but in Asia and America. This special session will cover theoretical, methodological, applied and practical issues related to SCGE, land use and transport modelings.
