Abstract

This special session focuses on those studies that analyze, from different perspectives, related issues between the tourism sector and sustainability.

It is intended to value especially three aspects: the consumption of energy and water, maintenance of cultural and environmental heritage, and corporate social responsibility.

Topics included in this issue (but not limited to) may be:

- Energy, production, and sustainability relationships in the economy and in the economic sectors
- Water, production, and sustainability relationships in the economy and in the economic sectors
- Environmental Kuznets Curve (EKC) by economic sectors
- Energy and water EKC in the economy and in the economic sectors
- Energy use, production and climate variables in the economy and in the economic sectors

- Sustainability actions to promote sustainability economic growth and sustainability sectors growth
- Novelty ideas related to sustainability in the economic sectors
