

Society for Ecological Restoration

The SER are a global community of restoration professionals that actively engage in the ecologically sensitive repair and recovery of degraded ecosystems, utilizing a range of experiences, knowledge sets and cultural perspectives to decrease the impact of the world's environmental footprint.

The World Conference on Ecological Restoration

The 2017 World Conference on Ecological Restoration hosted in Brazil brought together field experts to knowledge share on the latest scientific advances, environmental policy questions and innovative methods for returning ecosystems to health and vitality.

Their Incredible Impact

The conference attracted 1,000 delegates encouraging knowledge transfer across more than 60 countries, and facilitated paid-for attendance from delegates in developing countries, in recognition of those being the hardest hit from environmental degradation.

Outcomes

The association made a donation to support local restorative activities in the area to offset the conference's footprint, and gave attendees the opportunity to spend the day volunteering at a restoration site near the venue, planting trees and collecting native seed.
