The Salad Bowl Particle Accelerator

<https://www.scienceinschool.org/article/2017/particle-accelerator-your-salad-bowl/>

Connect to Earth terminal

Connect to High Voltage Terminal

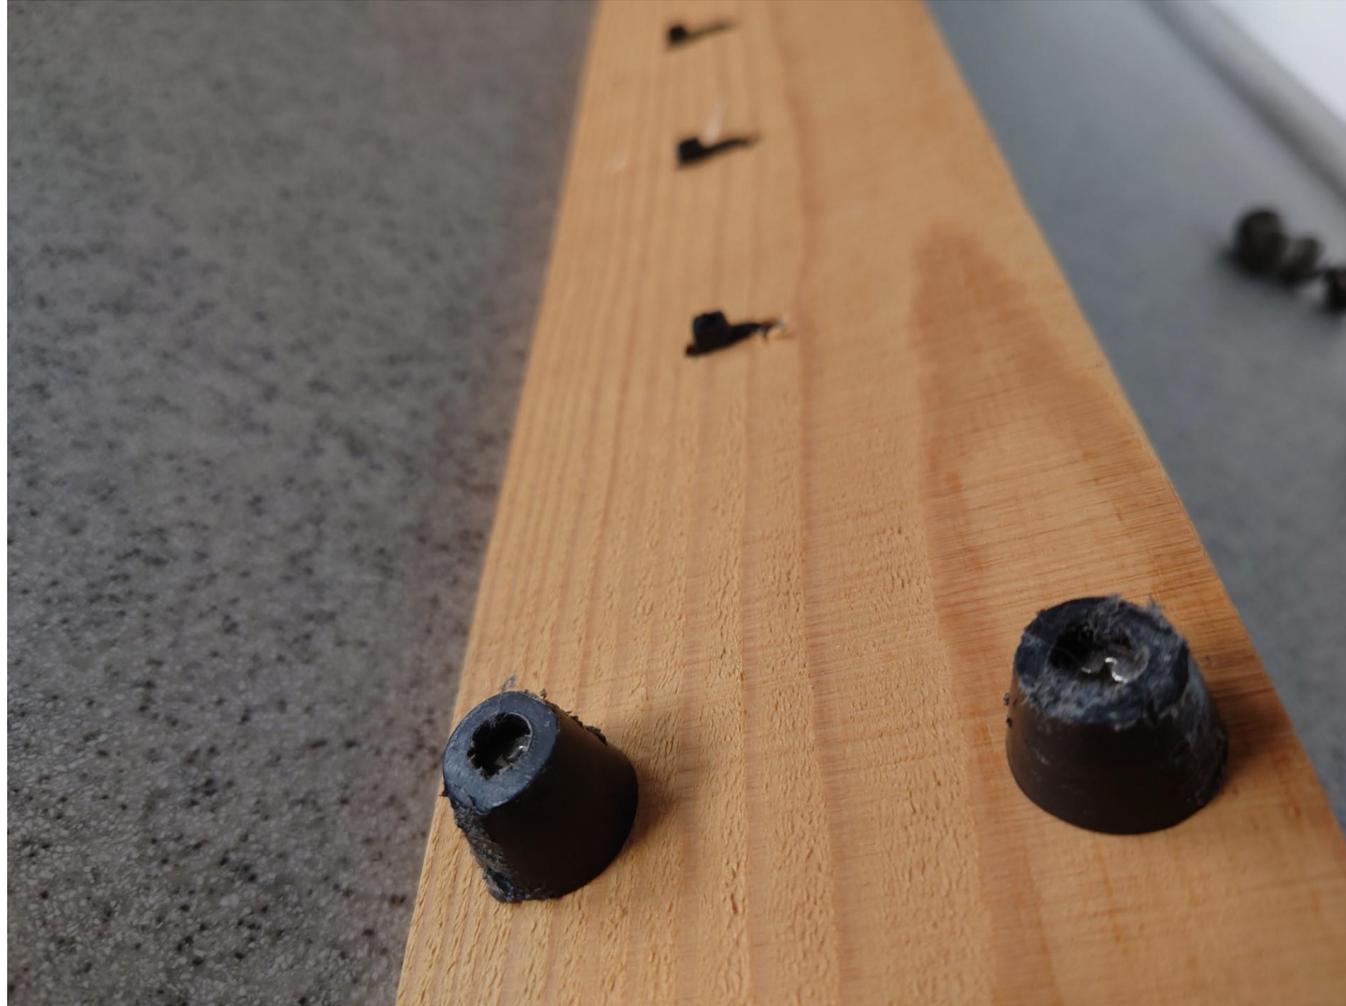

The Linear “Guttering” Accelerator

(thanks to Drew Burrett for this invention and the photographs)

<https://www.stuckwithphysics.co.uk/2016/03/model-linear-accelerator/>

Gauss Rifle Magnetic Linear Accelerator

<https://www.first4magnets.com/blog/how-to-make-a-gauss-rifle/>

Lascells Cloud Chamber

- One in every local authority.
- Great alternative to dry ice variant
- No dry ice or water required
- Integrated power supply
- Teachers guide available for this

(email gw07colquhounpeter@glow.sch.uk if there isn't one with your kit)

<https://www.youtube.com/watch?v=zkyvzozfv00>

SUBATOMIC PARTICLE PLUSHIES
FROM THE STANDARD MODEL OF PHYSICS & beyond!

> **MAKING PARTICLE PHYSICS FUN SINCE 2008!**

> **OVER 50,000 SOLD**

THEORETICALS

TACHYON
Can this devious and clever particle really travel faster than light?

GRAVITON
Still unobserved, yet theoretically *everywhere*, he's got big legs for jumping branes.

DARK MATTER
The mysterious missing mass. Difficult to see because he's so *dark*.

NUCLEONS

PROTON
We would not be here without her positivity.

NEUTRON
He insists on remaining neutral.

Top Quark

Quarks

CLASSIFICATION: Fermion > Quark

SPIN: $\frac{1}{2}$

[Wikipedia](#)

CHARGE: $+\frac{2}{3}$

MASS: 169-173 GeV

SYMBOL: t

[BUY](#)

The massive and extremely short-lived **TOP QUARK** is too unstable to be found in any [baryons](#) or [mesons](#). The last of the six quarks to be discovered, it wasn't until 1995 at Fermilab that physicists finally observed this (predicted) particle. It is the most massive observed particle in the Zoo and usually decays into a bottom quark via the [weak interaction](#).

Bottom Quark

Quarks

CLASSIFICATION: Fermion > Quark

SPIN: $\frac{1}{2}$

[Wikipedia](#)

CHARGE: $-\frac{1}{3}$

MASS: 4.13-4.37 GeV

SYMBOL: b

[BUY](#)

The **BOTTOM QUARK** is about four times the mass of the [proton](#) and is easily identified in experiments. Originally named "beauty," the bottom quark was discovered in 1977 by Leon Lederman's group at Fermilab. It is often the decay product of the short-lived top quark and would be a decay product of the [Higgs boson](#).

Photon

Bosons

CLASSIFICATION: Boson

SPIN: 1 [Wikipedia](#)

CHARGE: 0

MASS: 0

SYMBOL: γ

○○○○○○○○○○○○○○○○○○○○
LIGHT HEAVY

[BUY](#)

The massless wavicle we know and love, the **PHOTON**, better known as light, always travels at the speed of light and communicates the electromagnetic force in many forms from microwaves to gamma rays. About 10^{12} photons of sunlight fall on a pinhead each second. Displaying both wave and particle characteristics, photons were first postulated by Einstein in 1905.

Gluon

Bosons

CLASSIFICATION: Boson

SPIN: 1 [Wikipedia](#)

CHARGE: 0

MASS: 0

SYMBOL: g

○○○○○○○○○○○○○○○○○○○○
LIGHT HEAVY

[BUY](#)

The **GLUON** is the force-carrying particle of the strong nuclear force, which holds quarks together and binds the nucleus of atom. Discovered in 1979, it is stable, massless, and comes in 8 color states. At extremely high temperatures, quarks and gluons fluidly mix into a quark-gluon plasma. It is theorized that gluons can interact with each other and form [glueballs](#).

Leptons
CLASSIFICATION: **LEPTON**
SPIN: $\frac{1}{2}$
CHARGE: -1
MASS: > 0
SYMBOL: $e, \mu, \tau, \nu_e, \nu_\mu, \nu_\tau$

●○○○ LIGHT

Associated with the electron, the muon, and the tau lepton. Evidence for the existence of neutrinos came from the study of beta decay in 1930. The neutrino was discovered in 1956.

Leptons
CLASSIFICATION: **LEPTON**
SPIN: $\frac{1}{2}$
CHARGE: -1
MASS: > 0
SYMBOL: $e, \mu, \tau, \nu_e, \nu_\mu, \nu_\tau$

●○○○ LIGHT

The electron is the most common lepton. It is a fermion and obeys the Pauli exclusion principle. It is the lightest of the leptons and has a mass of approximately 0.5 MeV/c².

Quarks
CLASSIFICATION: **QUARK**
SPIN: $\frac{1}{2}$
CHARGE: $\frac{2}{3}$ or $-\frac{1}{3}$
MASS: > 0
SYMBOL: u, d, s, c, b, t

●○○○○○ LIGHT

The quarks are the building blocks of matter. They are fermions and obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0.1 MeV/c².

Leptons
CLASSIFICATION: **LEPTON**
SPIN: $\frac{1}{2}$
CHARGE: -1
MASS: > 0
SYMBOL: $e, \mu, \tau, \nu_e, \nu_\mu, \nu_\tau$

●○○○ LIGHT

The leptons are the building blocks of matter. They are fermions and obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0.5 MeV/c².

Bosons
CLASSIFICATION: **BOSON**
SPIN: 1
CHARGE: 0
MASS: 0
SYMBOL: $\gamma, W, Z, \pi, \rho, \dots$

○○○○○○ LIGHT

The bosons are the force carriers. They are bosons and do not obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0 MeV/c².

Bosons
CLASSIFICATION: **BOSON**
SPIN: 1
CHARGE: 0
MASS: 0
SYMBOL: $\gamma, W, Z, \pi, \rho, \dots$

○○○○○○ LIGHT

The bosons are the force carriers. They are bosons and do not obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0 MeV/c².

Bosons
CLASSIFICATION: **BOSON**
SPIN: 1
CHARGE: 0
MASS: 0
SYMBOL: $\gamma, W, Z, \pi, \rho, \dots$

○○○○○○ LIGHT

The bosons are the force carriers. They are bosons and do not obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0 MeV/c².

Quarks
CLASSIFICATION: **QUARK**
SPIN: $\frac{1}{2}$
CHARGE: $\frac{2}{3}$ or $-\frac{1}{3}$
MASS: > 0
SYMBOL: u, d, s, c, b, t

●○○○○○ LIGHT

The quarks are the building blocks of matter. They are fermions and obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0.1 MeV/c².

Quarks
CLASSIFICATION: **QUARK**
SPIN: $\frac{1}{2}$
CHARGE: $\frac{2}{3}$ or $-\frac{1}{3}$
MASS: > 0
SYMBOL: u, d, s, c, b, t

●○○○○○ LIGHT

The quarks are the building blocks of matter. They are fermions and obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0.1 MeV/c².

Quarks
CLASSIFICATION: **QUARK**
SPIN: $\frac{1}{2}$
CHARGE: $\frac{2}{3}$ or $-\frac{1}{3}$
MASS: > 0
SYMBOL: u, d, s, c, b, t

●○○○○○ LIGHT

The quarks are the building blocks of matter. They are fermions and obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0.1 MeV/c².

Quarks
CLASSIFICATION: **QUARK**
SPIN: $\frac{1}{2}$
CHARGE: $\frac{2}{3}$ or $-\frac{1}{3}$
MASS: > 0
SYMBOL: u, d, s, c, b, t

●○○○○○ LIGHT

The quarks are the building blocks of matter. They are fermions and obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0.1 MeV/c².

Quarks
CLASSIFICATION: **QUARK**
SPIN: $\frac{1}{2}$
CHARGE: $\frac{2}{3}$ or $-\frac{1}{3}$
MASS: > 0
SYMBOL: u, d, s, c, b, t

●○○○○○ LIGHT

The quarks are the building blocks of matter. They are fermions and obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0.1 MeV/c².

Quarks
CLASSIFICATION: **QUARK**
SPIN: $\frac{1}{2}$

●○○○○○ LIGHT

The quarks are the building blocks of matter. They are fermions and obey the Pauli exclusion principle. They are the lightest of the particles and have a mass of approximately 0.1 MeV/c².

To create particle cards you need....

Colour printer, laminator, particle zoo app.

Instructions

Load up the app on your Iphone/android and take screen shots of each of the particle info screens. (If you have a small class, I would limit it to the fundamental/well known ones.) Save the pictures to your PC, then paste them all on to a word document. Print out in colour, then laminate!

Alternatively, just use the word document that's already made up.

You will need the following...

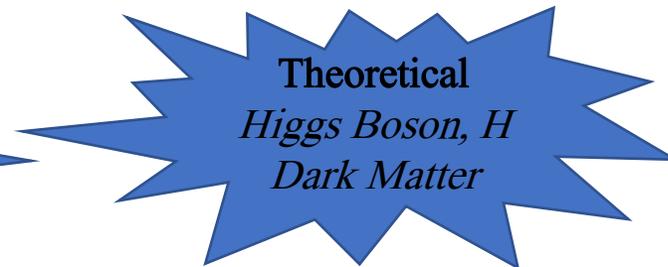

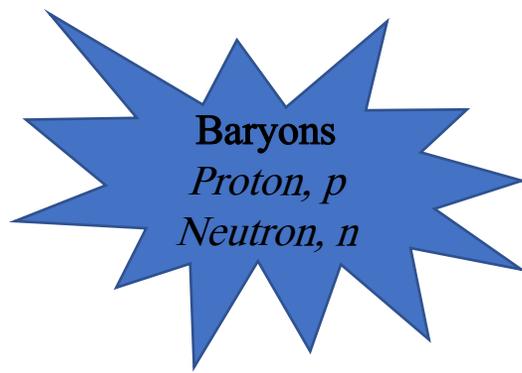

- Felt
- Pipe Cleaner
- Googly Eyes
- Scissors
- Glue

Order from arts and crafts website like www.ypo.co.uk
Alternatively beg/borrow/steal from your school's art department.

1. Collect the appropriate felt, eyes and pipe cleaner to go with your particle.
2. Construct your model using the scissors and glue provided. Make it about the size of your hand.
3. Create an A5 info sheet for your particle. Remember and make your writing quite big as it will go on the wall.
4. As well as the name of the particle, it should include information about its classification, charge, mass, symbol and the date it was discovered.

| | Fermions | | | bosons | |

| | e electron (-1) | m muon (-1) | t tau (-1) | W W boson | |

quarks

leptons

UP QUARK
 CLASSIFICATION: Fermion > Quark
 SPIN: 1/2
 CHARGE: +2/3
 MASS: 2.3 MeV
 SYMBOL: u

The UP quark is the heaviest of the six quarks and is found in the proton. It gives matter its up quark content. It is found in the top quark, in the strange quark, in the charm quark, in the bottom quark, and in the light quark u, b, and s.

Down Quark
 CLASSIFICATION: Fermion > Quark
 SPIN: 1/2
 CHARGE: -1/3
 MASS: 4.7 MeV
 SYMBOL: d

It is the second heaviest of the six quarks and is found in the neutron. It gives matter its down quark content. It is found in the top quark, in the strange quark, in the charm quark, in the bottom quark, and in the light quark u, b, and s.

ELECTRON NEUTRINO
 CLASSIFICATION: Fermion > Lepton
 SPIN: 1/2
 CHARGE: 0
 MASS: 0.1 MeV
 SYMBOL: $\bar{\nu}_e$

The ELECTRON NEUTRINO is the lightest of the six leptons and is found in the electron. It gives matter its electron neutrino content. It is found in the muon neutrino, in the tau neutrino, and in the electron neutrino.

Electron
 CLASSIFICATION: Fermion > Lepton
 SPIN: 1/2
 CHARGE: -1
 MASS: 0.5 MeV
 SYMBOL: e

The ELECTRON is the lightest of the six leptons and is found in the electron. It gives matter its electron content. It is found in the muon, in the tau, and in the electron.

CHARM QUARK
 CLASSIFICATION: Fermion > Quark
 SPIN: 1/2
 CHARGE: +2/3
 MASS: 1.27 GeV
 SYMBOL: c

The CHARM quark is the second heaviest of the six quarks and is found in the charm quark. It gives matter its charm quark content. It is found in the top quark, in the bottom quark, and in the charm quark.

Strange Quark
 CLASSIFICATION: FERMION > QUARK
 CHARGE: -1/3
 MASS: 70-130 MeV
 SYMBOL: s
 ORTE OF DISCOVERY: 1946

DARK MATTER

Classification : Theoretical

22% Dark Matter

- 3-6% intergalactic dust
- 0-4% stars, cats, people, pudding, etc

Dark Matter is the name given to a material in the Universe that does not emit or reflect light, but is necessary to explain the observed gravitational effects in the stars and galaxies. Along with this dark energy, this mysterious stuff comprises 96% of the Universe.

Some Physicists believe supersymmetric partner particles (SUSY) to be a candidate for dark matter.
