Using Data to Develop Strategy

This presentation covers how HMRC uses data at a strategic level to tackle compliance risks and threats to the UK tax base.

I'll cover:

- ☐ The Strategic Picture of Risk (SPR)
- ☐ How we build the products
- ☐ How we use our analytical insight

UK Tax Gap at a glance

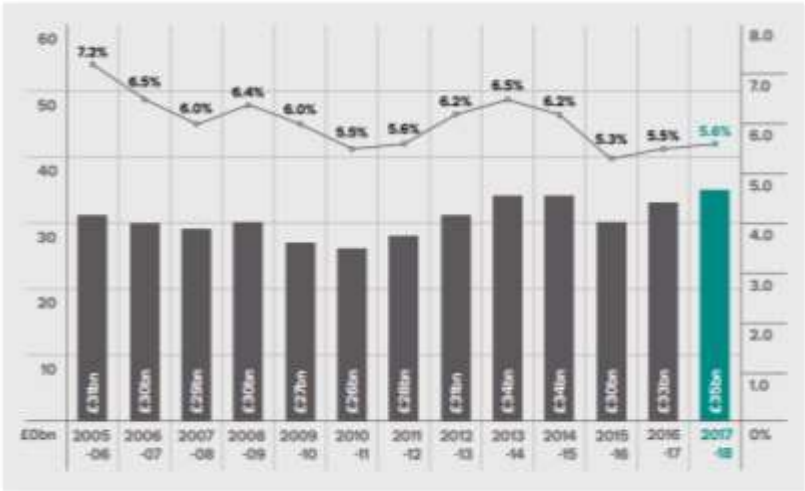

in 2017-18

The tax gap is estimated to be **£35 billion**, 5.6% of tax liabilities. It's the difference between the amount of **tax that should be paid** to HMRC and **what is actually paid**. We publish the tax gap.

Why measure it? Tax gap analysis helps us to **understand the losses** in the tax system.

The Strategic Picture of Risk is HMRC's top level assessment of strategic compliance risks, highlighting their **scope**, **scale** and **impact**.
We do not publish the SPR.

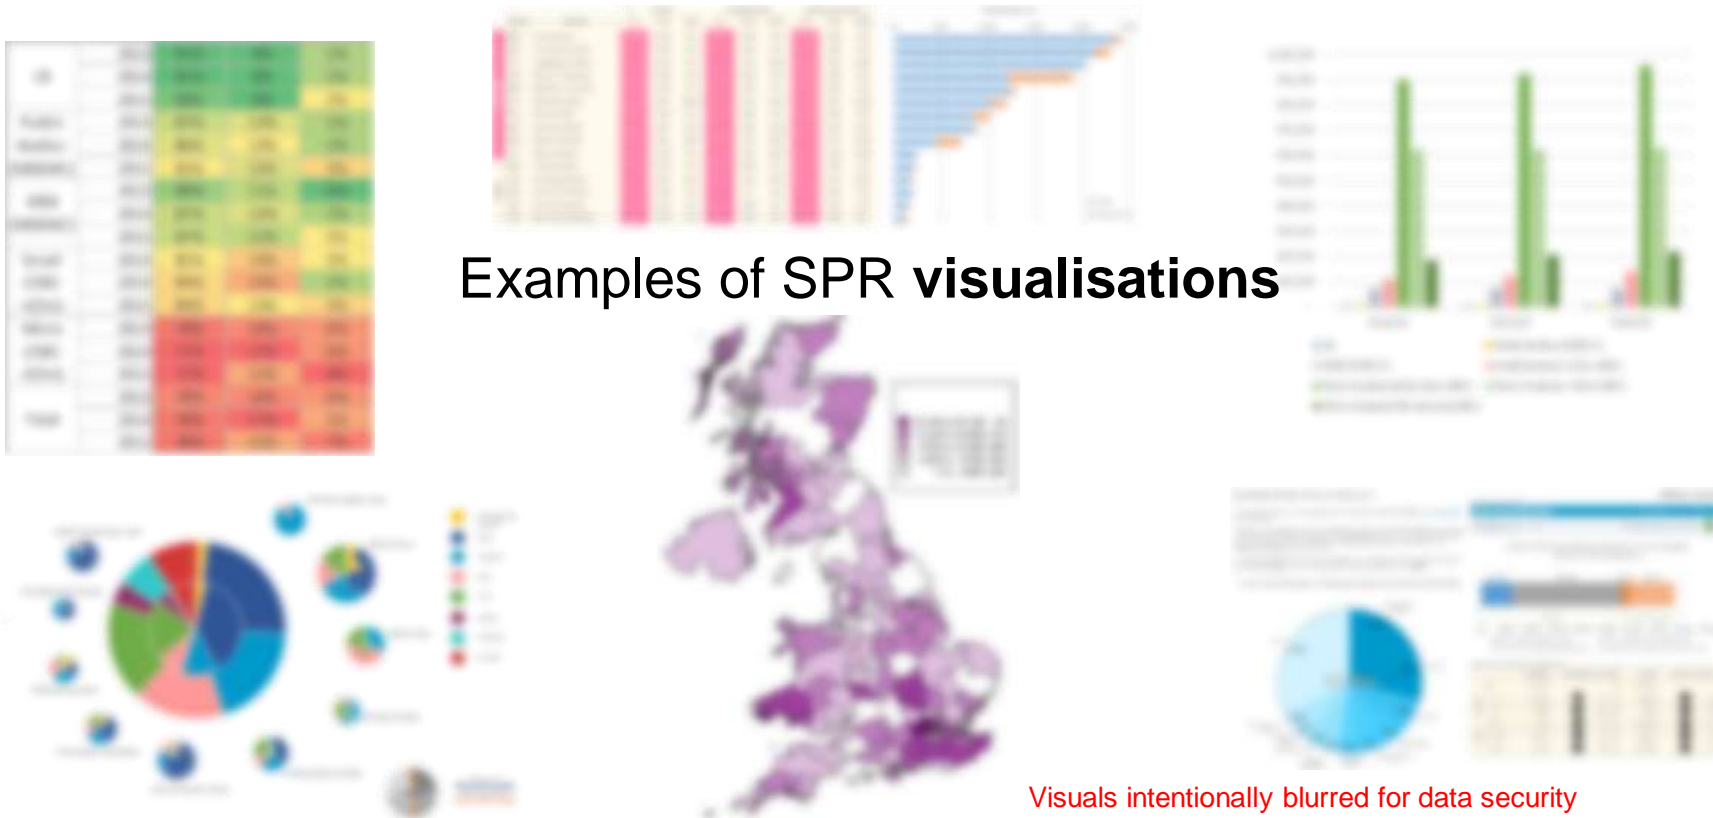

Tax gap and percentage of liabilities: 2005-06 to 2017-18

Value of the tax gap: 2017-18

What is the SPR?

Examples of SPR visualisations

Data Driven Compliance

- Connect
- Risk rules
- Predictive models
- Exploiting Intelligence
- Supply chains

Before Connect: "The Old Way"

Connect: Entities

Examples of entities we can search for and work with

People

Addresses

Telephones

Businesses

Accounts

Email
Addresses

Connect
begins to
organise the
linked data

Connect: In Numbers

- Underpins the majority of HMRC's compliance activity
- Detecting & preventing payment of over £500m fraudulent repayments per annum
- Delivers £1.2bn yield per annum
- Over 28 billion rows of data which can be analysed at the touch of a button

Data Driven Compliance

- Connect
- Risk rules
- Predictive models
- Exploiting Intelligence
- Supply chains

Merchant Acquirer Data – Regression Analysis

- Univariate Linear Regression (Forward Selection)
- Impact through Analysis: Data-Inight facilitating Operational Delivery

Merchant Acquirer Data – Stakeholder Engagement

Merchant Acquirer Data – Summary

- Data acquisition has facilitated the targeting of evasion in both the Formal and Hidden Economy.
- Modelling each of the key variables that impact card utilisation is fundamental to assessing risk:
 - Average Transaction Value (ATV)
 - Geographical Location
 - Nature of Trade
 - Size of Business
- Dynamic Benchmarking enables HMRC to tailor of our compliance response to the level of perceived risk.
- Merchant Acquirer Data has improved Hit-Rate across our Taskforce projects and supported the identification of £475m in Pipeline & Closed Case Yield.

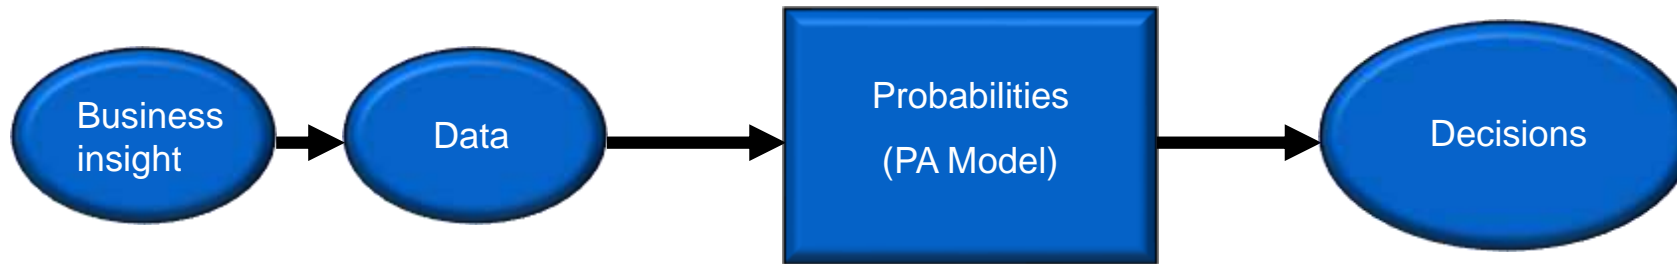

Data Driven Compliance

- Connect
- Risk rules
- Predictive models
- Exploiting Intelligence
- Supply chains

What is Predictive Analytics (PA)?

- Using knowledge of Population + Outcomes = Data driven decisions
- Way of generating single measure of an individual's/entities risk
- Type of Machine Learning - models improve with experience
- Pattern recognition – looking for anomalies and trends in transactions

Common PA examples

- Online dating ❤️
- Insurance quote
- Mortgage/Loan application
- Health check
- Online shopping

and in HMRC...**Compliance Risk Models**

Predictive Analytics in Compliance – Key Stats

Predictive Analytics is used to identify non-compliance to reduce the tax gap

c12 PA models

covering VAT, ECPA, ITSA & CT

10%

estimated performance uplift in hit rate when a new model is deployed

£300m

yield from face-to-face

Compliance interventions enabled by PA risk products

2.1mn

VAT population – PA models cornerstone of all VAT risking

£2m

efficiency savings in our risk processes enabled by PA in the last 18 months

36k cases

covering VAT, ECPA, ITSA & CT

Data Driven Compliance

- Connect
- Risk rules
- Predictive models
- Exploiting Intelligence
- Supply chains

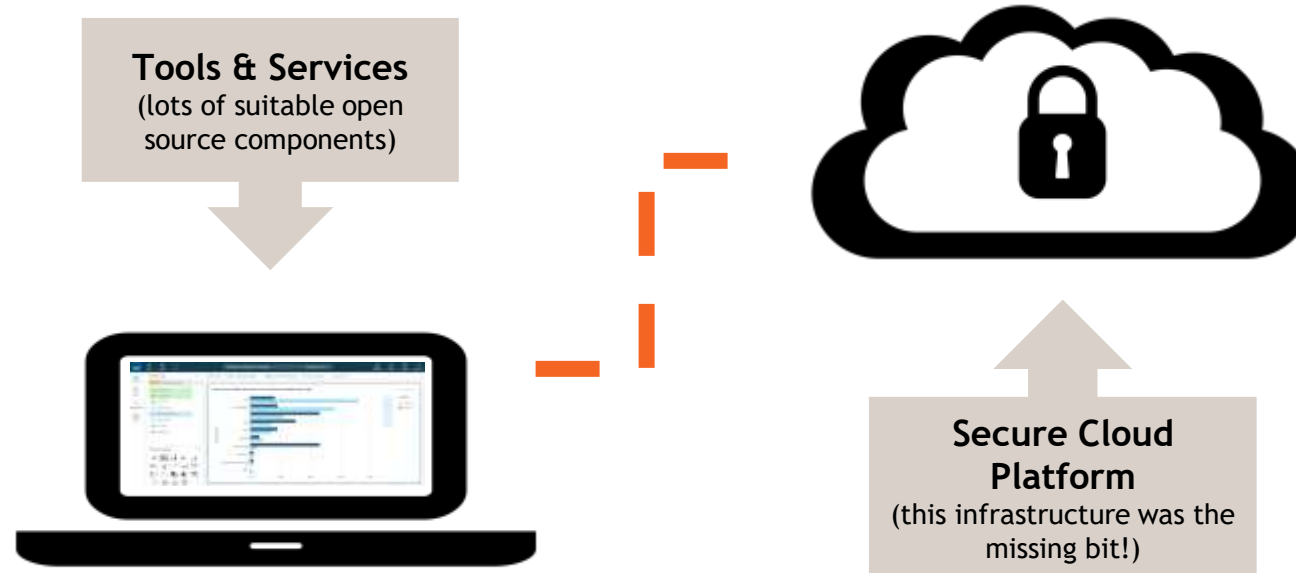

Exploiting Intelligence

The BDEC platform
provides a secure
environment to perform
data analysis at scale

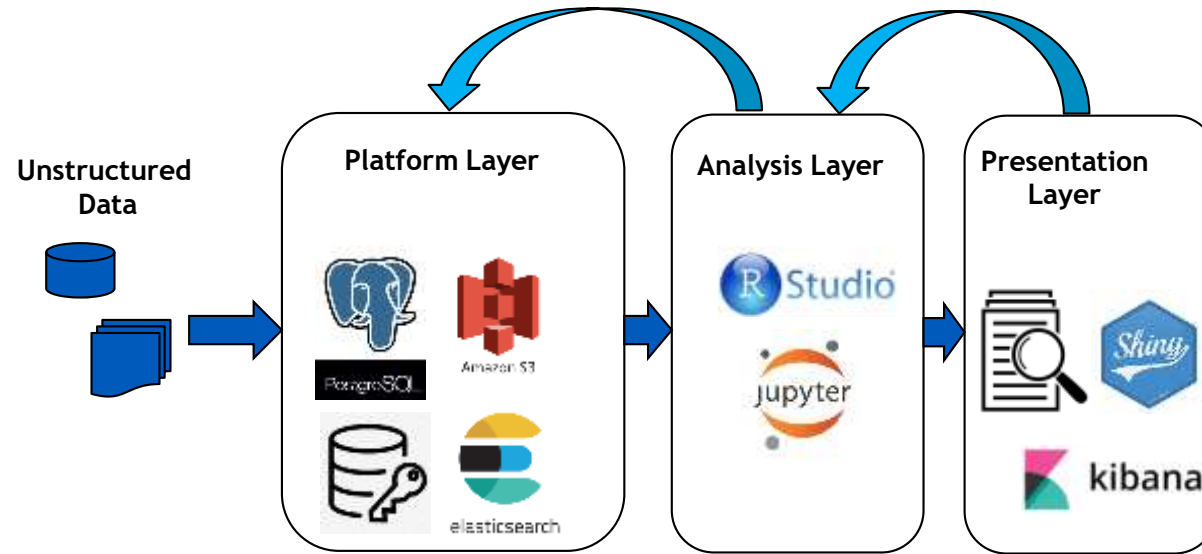

Exploiting Intelligence

“Enable analysts to analyse by bringing tools, computing power and operational data together”

Exploiting Intelligence
