

SINGLE-USE LIKE YOU'VE NEVER SEEN IT BEFORE

A NEW ERA FOR SINGLE-USE BRONCHOSCOPY

Ambu® aScope™ 5 Broncho

Ambu

ONE SOLUTION FOR A BROAD RANGE OF PROCEDURES

With aScope 5 Broncho, you're not limited by the number of available endoscopes. You have a variety of sterile bronchoscopes in different sizes available whenever you need them for diagnostic, therapeutic and peripheral bronchoscopy procedures.

Diagnostic and therapeutic procedures

The aScope 5 Broncho HD 5.0/2.2 and 5.6/2.8 endoscopes offer excellent manoeuvrability, even when working with endotherapy instruments, including high-frequency tools. This, combined with a bright and clear image, makes them suitable for a wide range of diagnostic and therapeutic procedures.

BAL procedures

The single-use Ambu® aScope™ 5 Broncho Sampler Set is a unique integrated sampling solution that protects the sample, simplifies workflow and improves safety.

It includes a 60 ml sample container to address the need for larger samples in BAL procedures.

The Ambu® aScope™ 5 Broncho Sampler Set

Protects the sample from start to finish

- Closed-loop system reduces the risk of sample contamination and loss common with Lukens traps
- Minimises exposure points
- Protects the HCP from exposure to airway secretions

Simple to operate without assistance

- Seamlessly integrated with the aScope 5 Broncho endoscope
- Allows you to switch between suction and sampling at the turn of a knob, without the need to switch tubing
- High degree of control when navigating the lungs

Sterile and ready to go

- Single-use solution is sterile straight from the package
- Always available when you need it
- Clicks right onto the aScope 5 Broncho endoscope

Peripheral bronchoscopy procedures

aScope 5 Broncho 4.2/2.2 offers a unique opportunity to take advantage of a regular-sized working channel in a thin bronchoscope. The thin size and high bending angles of 210°/210° enable excellent manoeuvrability.

What's more, it is compatible with commonly used endotherapy instruments and active tools*. These capabilities make aScope 5 Broncho 4.2/2.2 ideal for peripheral bronchoscopy procedures.

Smaller anatomies

With its thin outer diameter, aScope 5 Broncho 2.7/1.2 can be used in smaller anatomies without compromising on manoeuvrability, image quality or access to the working channel. In fact, they offer a 120° field of view and 3-100mm depth of field. The ultrathin aScope 5 Broncho 2.7/1.2 is suitable for ET tubes as small as 3.5.

STERILITY AND EFFICIENCY OF THE SINGLE-USE CONCEPT

- **Sterile:** No risk of patient-to-patient contamination
- **Always available:** No reprocessing or repair bottlenecks
- **Consistent performance:** No wear and tear affecting the bending performance or imaging

THE LEVEL OF QUALITY NEEDED IN THE BRONCHOSCOPY SUITE

- **High performance:** Excellent manoeuvrability and high-quality imaging
- **Greater flexibility:** A variety of readily available bronchoscopes in 4 different sizes
- **A unique sampling solution:** The aScope 5 Broncho Sampler Set simplifies BAL procedures (see other side)

*aScope 5 Broncho 2.7/1.2 and 4.2/2.2 are not compatible with high-frequency tools
