

Construction waste management

A sustainability initiative by CEMEX

Daniel Escudero

daniel.Escudero@cemex.com

CEMEX Regional Processes & IT EMEA

City development and evolution is at the core of the market the **construction industry** and on it represents and intricate part of economic growth

As with any city development in most of the cases in order to give way to the new, the old needs to be demolished.

Old buildings or constructions give way to greener buildings or more efficient infrastructure

along with tons of residue and waste...

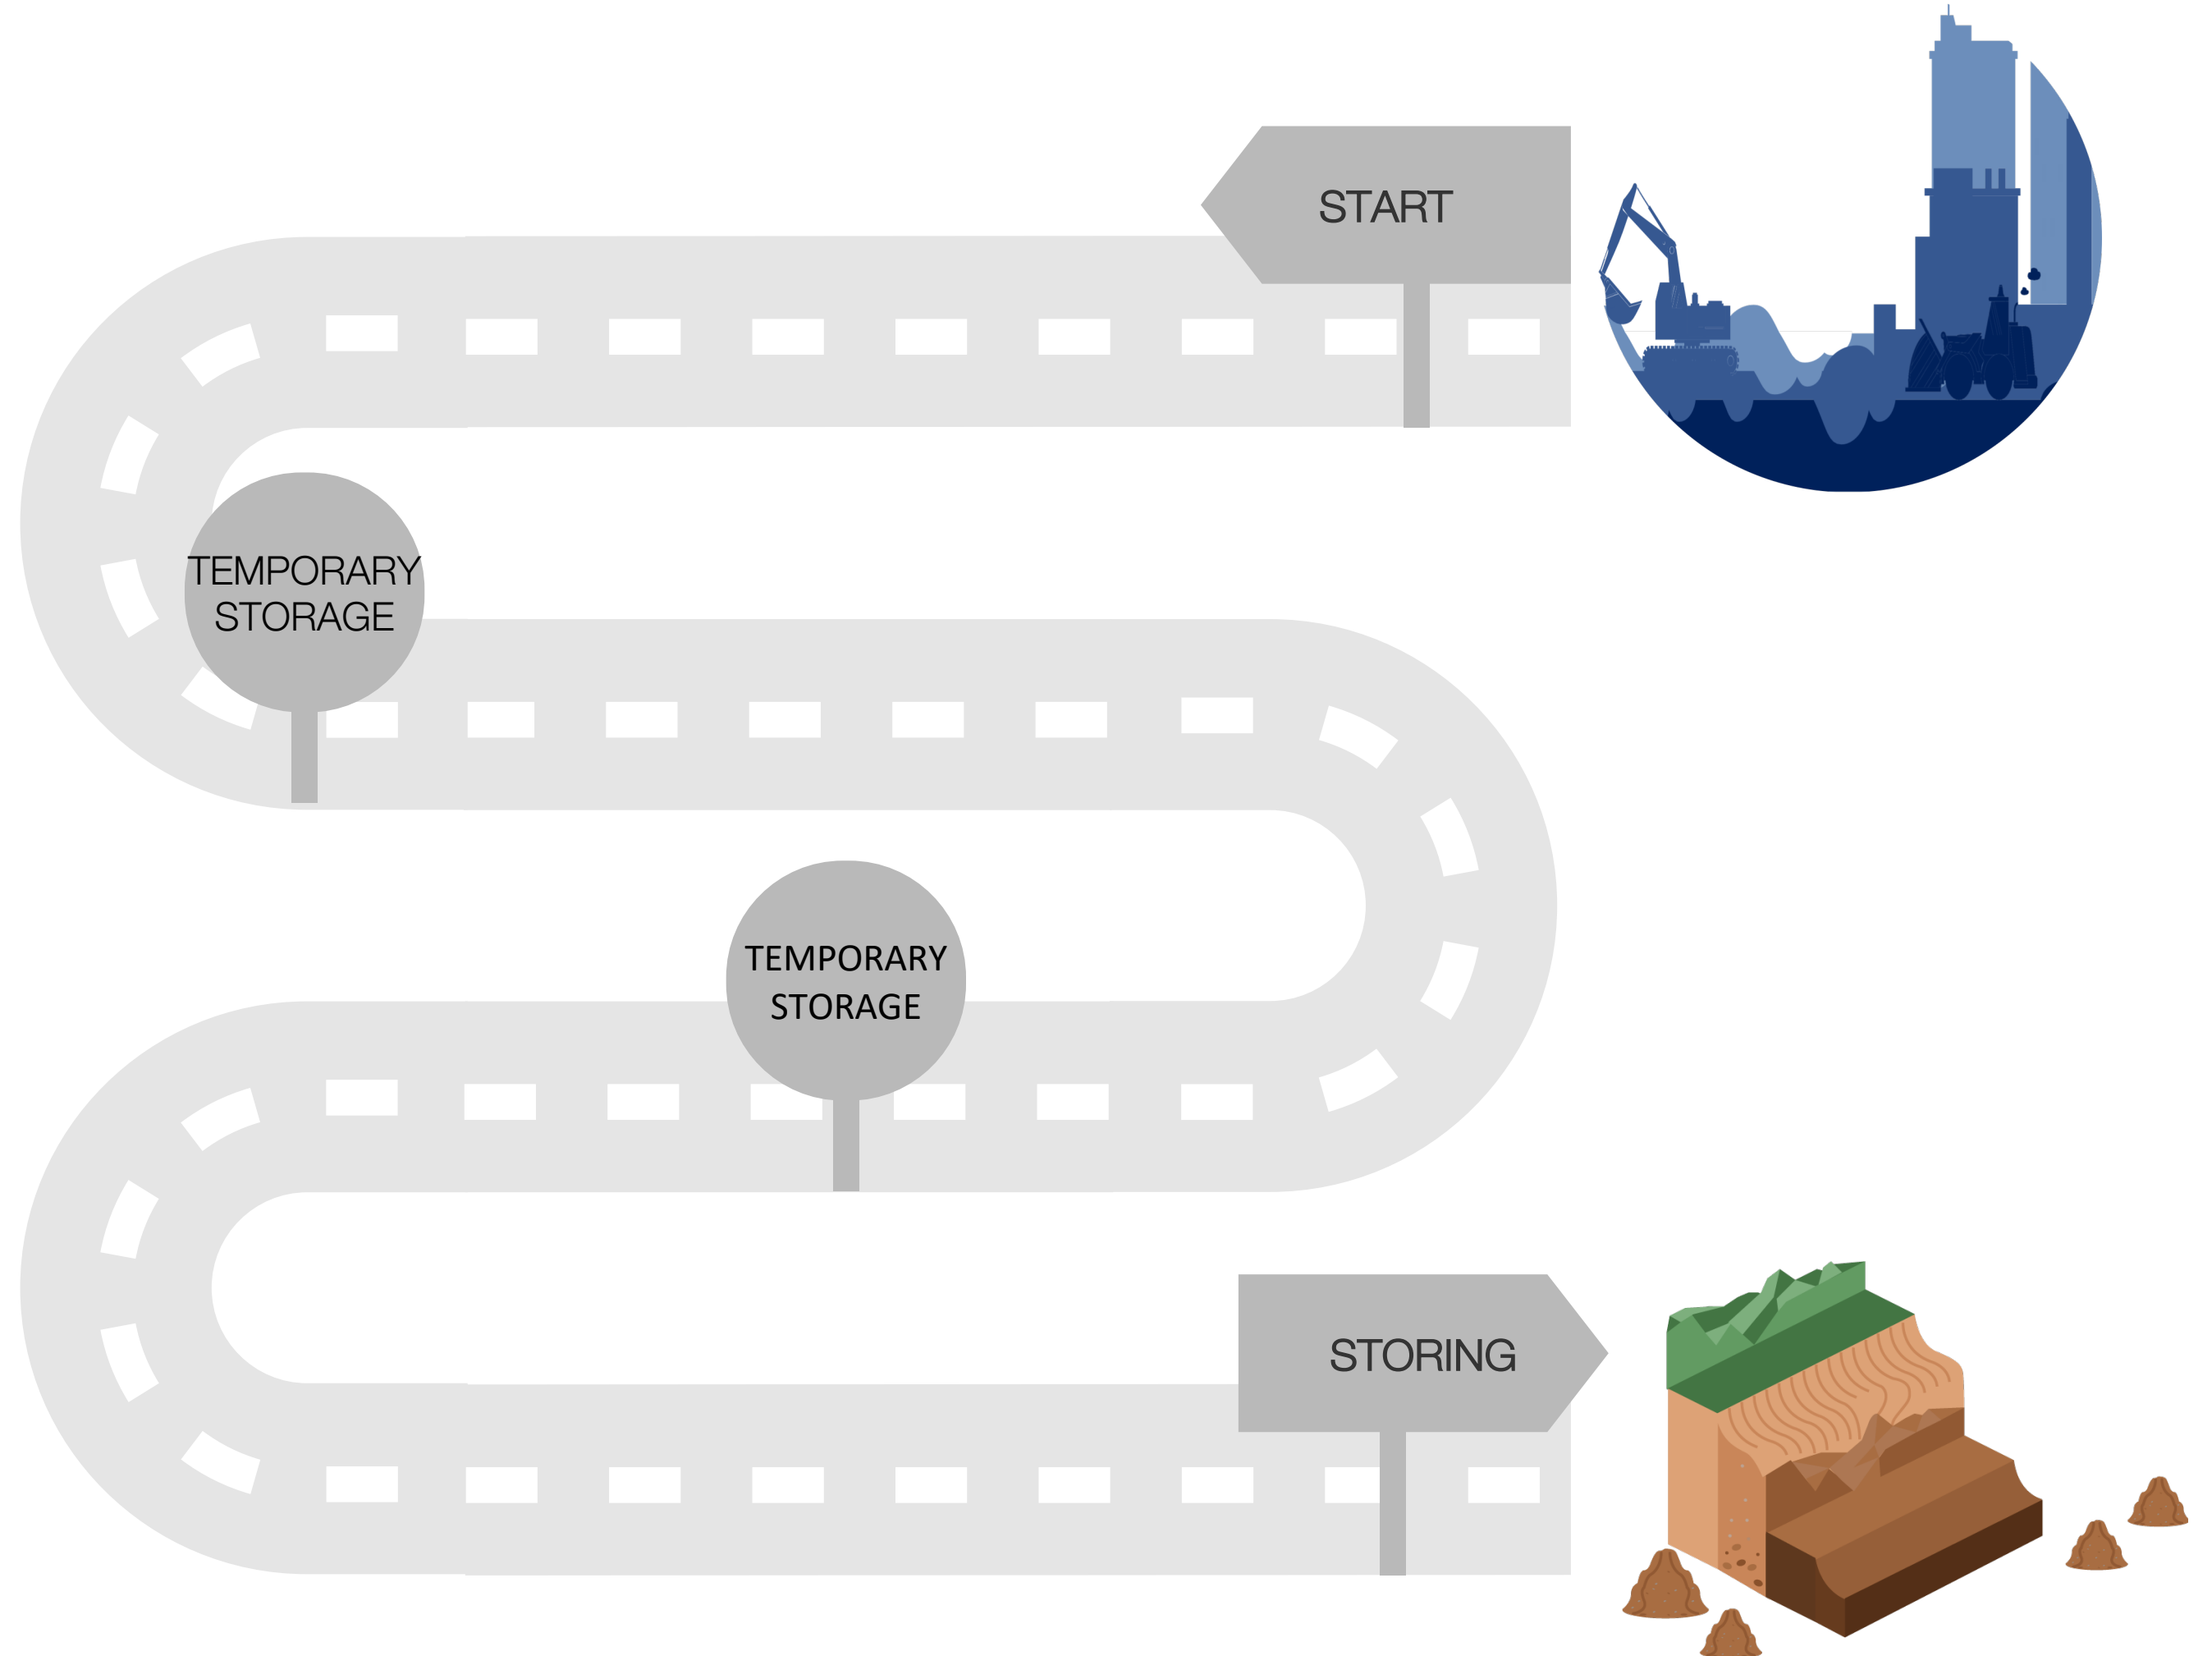

In CEMEX we continue to show our commitment with our environment, helping customers to manage and store this waste in a safe and ecological way.

**This initiative is part of our commitment to reduce by 35% our CO2 emissions
by 2030**

Traceability of waste material is key in order to comply with regulatory conditions and assurance of location of material for future reference

Partnering with SAP and other solutions in order to provide with an efficient control and complying with new rules and regulations

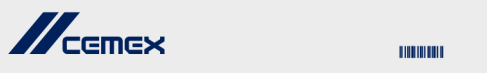

After material is tested, **reception and temporary or final location storage is managed in SAP ECC.**

Main processes supported by SAP

- Weighing and material reception
- Temporary locations transportation management
- Customer order, pricing, sales and invoicing
