The new  
path

---

# 1 About SAICA

# Mission

To provide sustainable paper solutions for corrugated board and packaging, while developing circularity in waste management

# Saica key facts & figures

HEADCOUNT

---

10,173

AGGREGATE SALES

---

3,566 M€

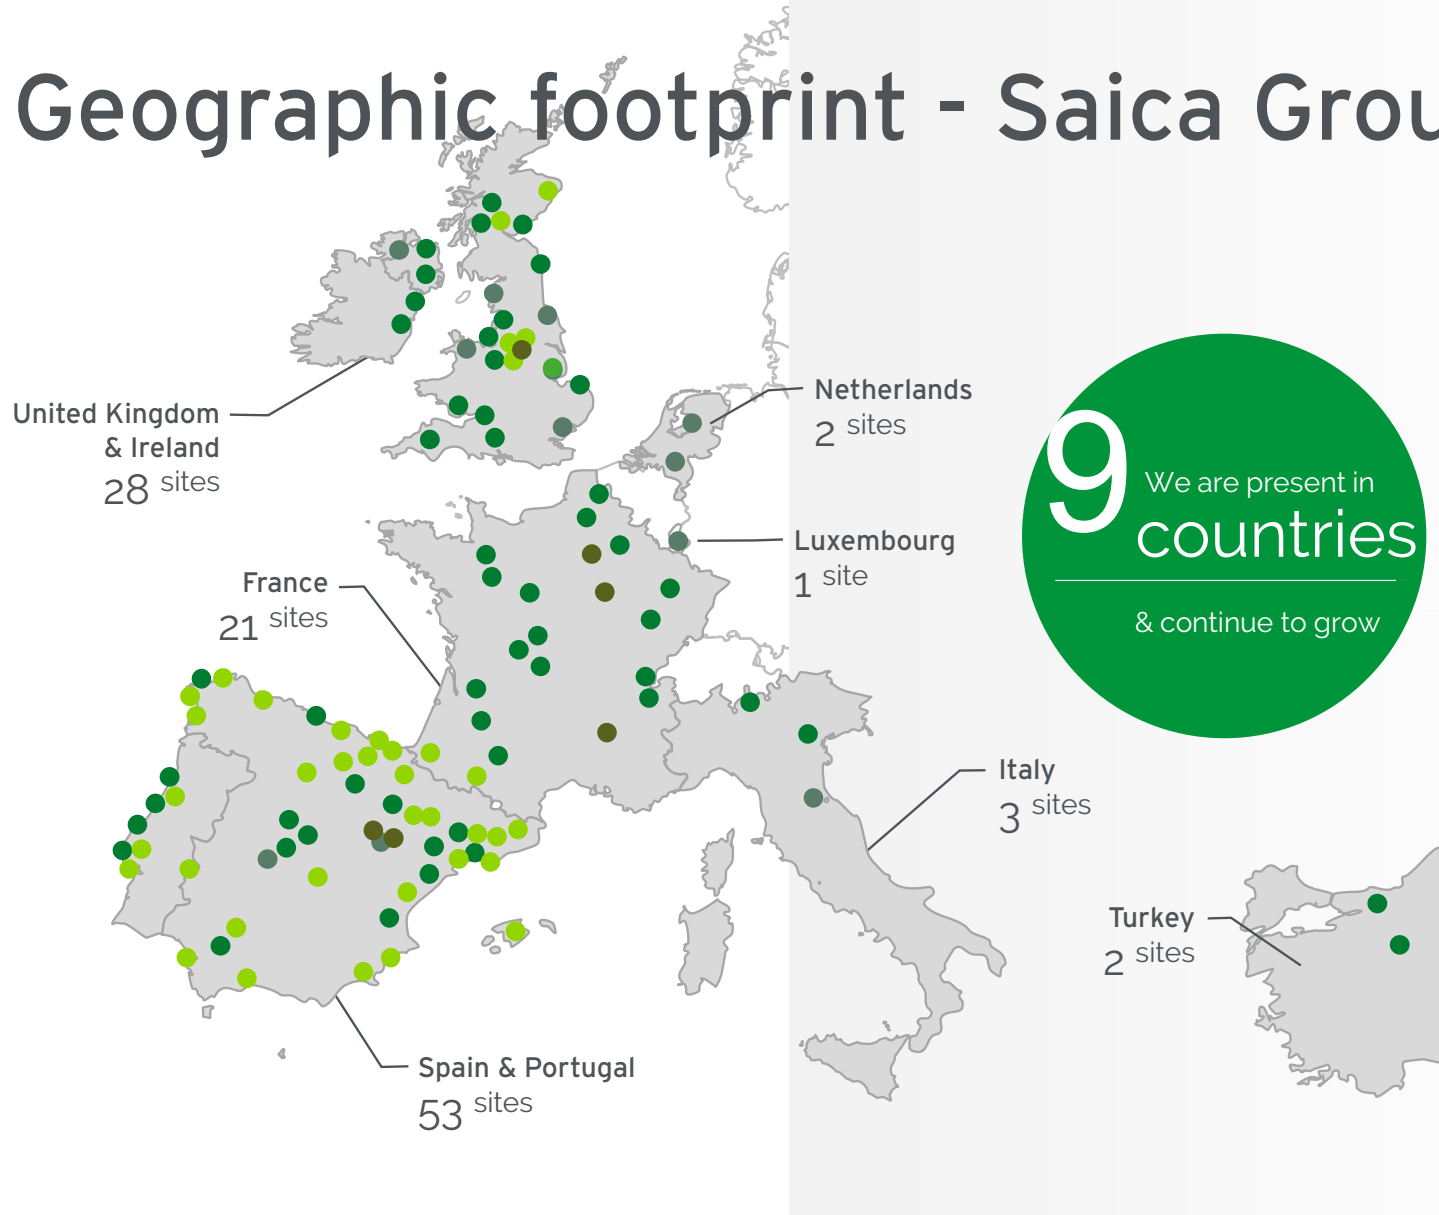

PRESENCE

---

9 COUNTRIES

31/12/2020 Data

# Geographic footprint - Saica Group

**9** We are present in **countries**  
& continue to grow

 <b>SAICANATUR</b>	<b>39</b> sites
 <b>SAICAPAPER</b>	<b>6</b> sites
 <b>SAICAPACK</b>	<b>53</b> sites
 <b>SAICAFLEX</b>	<b>12</b> sites

# Our integration cycle

Paper,  
our DNA.  
Its **INTEGRATION  
CYCLE**,  
the key to our  
success

The cycle  
allows the  
**RECYCLING**  
3.5 millions  
tons of waste

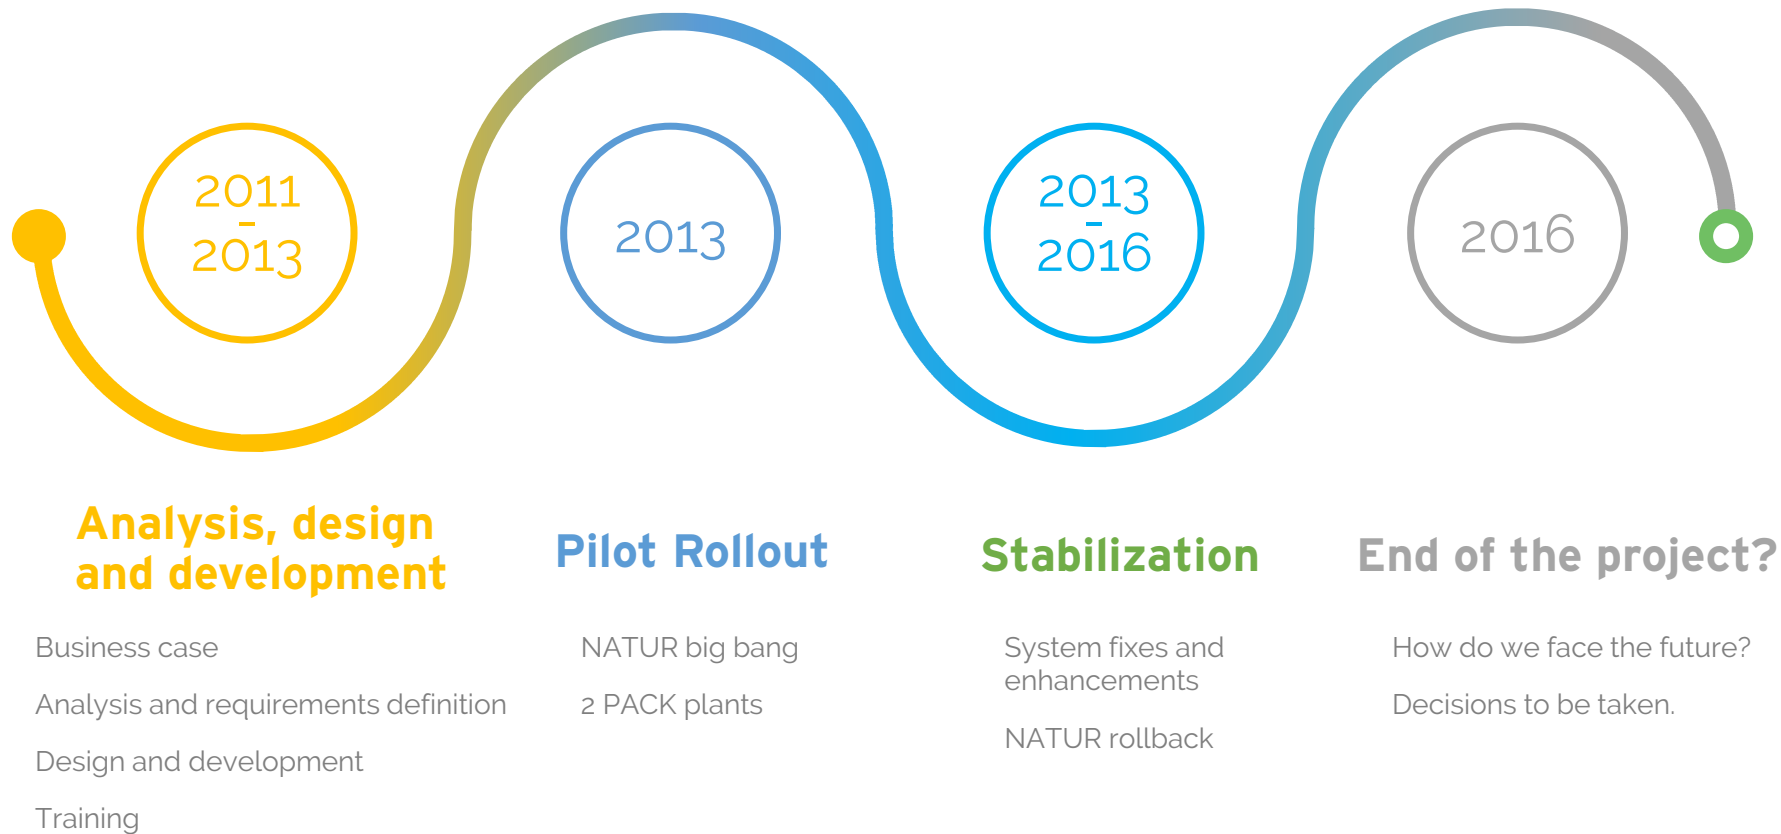

2

The long  
journey

# Timeline

---

# Road to fail

Use as many different consultants as you can and give the control to an external PMO

Keep going and don't stop to think

Choose your best IS team but with no experience in SAP

Put all your eggs in one basket

Fix the rollout date before start the project

1st SAP Implementation

# Stop and think

---

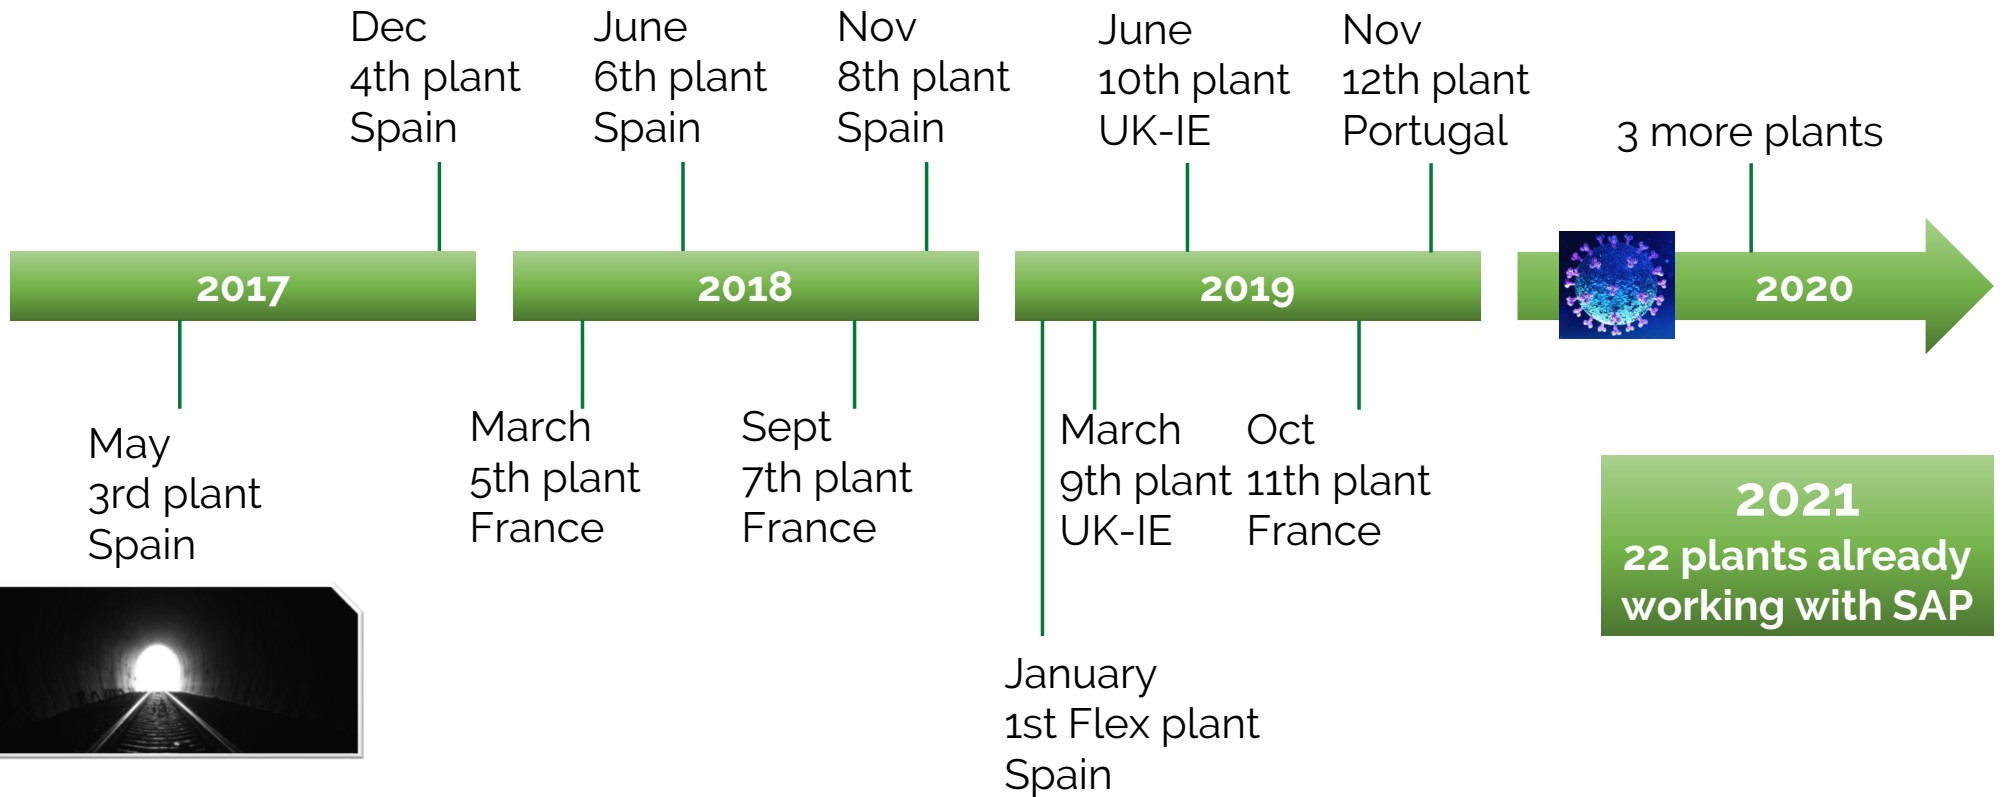

- 2 plants in 4 years is not a success
- More that 100 tickets per month, performance problems, business not aligned, teams with low level of motivation, new CIO... The perfect storm

## STOP & THINK

- Possible **strategies**:
  1. Go ahead for the full solution and then deploy in all the plants, one by one
  2. Prepare a new rollout to break the inertia, and boost the project
- Decision: **Go for a new plant**, the best plant available.
  - More that 30 workshops with different KUs
  - Almost 180 new gaps and new functionalities
  - Update the training documents and rollout procedures

# Timeline II

# 3

The new path

# New path

---

- It's long journey, go **step by step**
- SAP is going to be the ERP for all the company -> **Is your IS structure ready?**
- Review the **skills of your teams**: IS and business
- **Don't follow** all the advices from **consultants**
- **Listen to** all the advices from **consultants**
- A new **ERP has a big impact** in the plants. Listen to them but, in the end, it's a strategic decision
- **Standard is the first option** to consider. Use **Z code** for productivity transactions and not covered functionalities
  
- Always, always, always **common sense**
