

Miss Ziphozethu Ndlazi, MMSc, is a lecturer in the Discipline of Clinical Anatomy, in the School of Laboratory Medicine and Medical Sciences of the University of KwaZulu-Natal. She holds a Masters degree within the neurophysiology domain, with particular interest in understanding addiction and substance abuse. This research focused on the effect and impact of such substances on the anatomical structure of the brain and also the pathophysiological changes that are promoted within the wiring of the brain thereof. She is currently a PhD candidate, investigating the ethnomedicinal potential of traditional medicine in treating urinary tract infections. This research is funded by the NRF Thuthuka PhD track grant. She has served as a student representative council member for the Anatomical Society of Southern Africa (ASSA) and is a member of the Southern African Neurosciences Society (SANS), International Brain Research Organisation (IBRO) and the Golden Key International Honor Society.
