# PLHIV with precarious or no health coverage face complex barriers in accessing health care, treatment and support

This population makes up a significant proportion of the 10-10-10% gaps in the HIV care engagement care cascade and those who experienced major health inequities.

In response, a coalition of 10 health and community HIV service agencies in Greater Toronto collaborated to develop the Blue Door Clinic to bridge this important gap in linkage to care. The Blue Door Clinic was launched in August 2019 and started as a half day clinic every other week.

Our team: intake worker/case manager, nurse, physician and peer navigator

**Our Services**: timely full primary care, access to HIV treatments, Immunizations, Monitoring tests, connection to legal, social, and mental health supports.

#### Who are the precariously insured PLHIVs & what are the health care access gaps?

Status	Health care	Lab tests	Medication coverage	Social assistance
<ul> <li>New PR waiting for OHIP</li> <li>Migrant workers</li> <li>international students</li> </ul>	None	None	None	None
	Limited	Limited	None *	None
